

Human Development Indicators

Note on statistics in the Human Development Report

This Report's primary purpose is to assess the state of human development across the globe and provide a critical analysis of a specific theme each year. It combines thematic policy analysis with detailed country data that focus on human well-being, not just economic trends.

The indicators in the Report reflect the rich body of information available internationally. As a user of data, the Report presents statistical information that has been built up through the collective effort of many people and organizations. The Human Development Report Office gratefully acknowledges the collaboration of the many agencies that made publication of the latest data on human development possible (box 1).

To allow comparisons across countries and over time, where possible the indicator tables in the Report are based on internationally standardized data, collected and processed by sister agencies in the international system or, in a few cases, by other bodies. These organizations, whether collecting data from national sources or through their own surveys, harmonize definitions and collection methods to make their data as internationally comparable as possible. The data produced by these agencies may sometimes differ from those produced by national sources, often because of adjustments to harmonize data. In a few cases where data are not available from international organizations—particularly for the human development indices—other sources have been used. These sources are clearly referenced in the tables.

The text of the Report draws on a much wider variety of sources—commissioned papers, government documents, national human development reports, reports of international organizations, reports of non-governmental organizations and journal articles and other scholarly publications. Where infor-

mation from such sources is used in boxes or tables in the text, the source is shown and the full citation is given in the references. In addition, for each chapter a summary note outlines the major sources for the chapter, and end-notes specify the sources of statistical information not drawn from the Report's indicator tables.

CHANGES TO THE INDICATOR TABLES

The indicator tables in this year's Report reflect the continual efforts over the years to publish the best available data and to improve their presentation and transparency. While the structure of the indicator tables has been maintained, the tables have been streamlined to focus on indicators that are most reliable, meaningful and comparable across countries. This process has reduced the number of indicator tables—removing some tables altogether and consolidating others. In the important areas of health and education, however, additional space has been used to allow fuller analysis of the wealth of data on these issues.

This year's Report also makes more systematic use of purchasing power parity (PPP) rates of exchange, both in the indicator tables and in the text. For cross-country comparisons of real values where price differences matter, PPP data are more appropriate than data based on conventional exchange rates (box 2).

Improvements in this year's Report reflect the recent progress in measuring human development. One example is in the measurement of crime. In previous years the Report relied on data based on crimes reported to the police, information that depended heavily on a country's law enforcement and reporting system. Increasingly, however, data based directly on individuals' experiences with crime are available (box 3).

Major sources of data used in the Human Development Report

By generously sharing data, the following organizations made it possible for the *Human Development Report* to publish the important development statistics appearing in the indicator tables.

Carbon Dioxide Information Analysis Center (CDIAC) The CDIAC, a data and analysis centre of the US Department of Energy, focuses on the greenhouse effect and global climate change. It is the source of data on carbon dioxide emissions.

Food and Agriculture Organization (FAO) The FAO collects, analyses and disseminates information and data on food and agriculture. It is the source of data on food insecurity and agricultural indicators.

International Institute for Strategic Studies (IISS) An independent centre for research, information and debate on the problems of conflict, the IISS maintains an extensive military database. The data on armed forces are from its publication *The Military Balance*.

International Labour Organization (ILO) The ILO maintains an extensive statistical publication programme, with the *Yearbook of Labour Statistics* its most comprehensive collection of labour force data. The ILO is the source of wage and employment data and information on the ratification status of labour rights conventions.

International Monetary Fund (IMF) The IMF has an extensive programme for developing and compiling statistics on international financial transactions and balance of payments. Much of the financial data provided to the Human Development Report Office through other agencies originates from the IMF.

International Telecommunication Union (ITU) This specialized UN agency maintains an extensive collection of statistics on information and communications. The data on trends in telecommunications come from its database *World Telecommunication Indicators*.

Inter-Parliamentary Union (IPU) This organization provides data on trends in political participation and structures of democracy. The Report relies on the IPU for election-related data and information on women's political representation.

Joint United Nations Programme on HIV/AIDS (UNAIDS) This joint UN programme monitors the spread of HIV/AIDS and provides regular updates. Its *Report on the Global HIV/AIDS Epidemic* is the primary source of data on HIV/AIDS.

Luxembourg Income Study (LIS) A cooperative research project with 25 member countries, the LIS focuses on poverty and policy issues. It is the source of income poverty estimates for many OECD countries.

Organisation for Economic Co-operation and Development (OECD) The OECD publishes data on a variety of social and economic trends in its member countries as well as flows of aid. This year's Report presents data from the OECD on aid, employment and education.

Stockholm International Peace Research Institute (SIPRI) SIPRI conducts research on international peace and security. The *SIPRI Year-*

book: Armaments, Disarmament and International Security is the source of data on military expenditure and arms transfers.

United Nations Children's Fund (UNICEF) UNICEF monitors the well-being of children and provides a wide array of data. Its *State of the World's Children* is an important source of data for the Report.

United Nations Conference on Trade and Development (UNCTAD) UNCTAD provides trade and economic statistics through a number of publications, including the *World Investment Report*. It is the original source of data on investment flows that the Human Development Report Office receives from other agencies.

United Nations Educational, Scientific and Cultural Organization (UNESCO) This specialized UN agency is the source of data on education-related matters. The Report relies on data published in UNESCO's *Statistical Yearbook* and *World Education Report* as well as data received directly from the agency.

United Nations High Commissioner for Refugees (UNHCR) This UN organization provides data on refugees through its publication *Refugees and Others of Concern to UNHCR: Statistical Overview*.

United Nations Interregional Crime and Justice Research Institute (UNICRI) This UN institute carries out international comparative research in support of the United Nations Crime Prevention and Criminal Justice Programme. It is the source of data on crime victims.

United Nations Multilateral Treaties Deposited with the Secretary General (UN Treaty Section) The Human Development Report Office compiles information on the status of major international human rights instruments and environmental treaties based on the database maintained by this UN office.

United Nations Population Division (UNPOP) This specialized UN office produces international data on population trends. The Human Development Report Office relies on *World Population Prospects* and *World Urbanization Prospects*, two of its main publications, for demographic estimates and projections.

United Nations Statistics Division (UNSD) The UNSD provides a wide range of statistical outputs and services. Much of the national accounts data provided to the Human Development Report Office by other agencies originates from the UNSD. This year's Report also relies on the UNSD for data on trade and energy.

World Bank The World Bank produces data on economic trends as well as a broad array of other indicators. Its *World Development Indicators* is the primary source for a number of indicators in the Report.

World Health Organization (WHO) This specialized agency maintains a large array of data series on health issues, the source for the health-related indicators in the Report.

World Intellectual Property Organization (WIPO) As a specialized UN agency, WIPO promotes the protection of intellectual property rights throughout the world through different kinds of cooperative efforts. The Report relies on WIPO for patent-related data.

BOX 2

The why's and wherefore's of purchasing power parities

This year's Report systematically uses purchasing power parity (PPP) rates of exchange for comparing economic measures across countries. It uses World Bank PPPs to provide the latest overall GDP measures covering a wide range of countries, and data based on the Penn World Tables for more detailed estimates and to facilitate consistent comparisons over long periods.

To compare economic statistics across countries, the data must first be converted into a common currency. Unlike conventional exchange rates, PPP rates of exchange allow this conversion to take account of price differences between countries. By eliminating differences in national price levels, the method facilitates comparisons of real values for income, poverty, inequality and expenditure patterns.

While the conceptual case for using PPP rates of exchange is clear, practical issues remain. World Bank PPPs have been compiled directly for 118 of the world's approximately 220 distinct national political entities. For countries for which PPPs are not directly compiled, estimates are made using econometric regression. This approach assumes that the economic

characteristics and relationships commonly observed in surveyed countries also apply to the non-surveyed countries. While this assumption may not necessarily hold, fundamental economic relationships are thought to have general relevance and can be associated with independently observed variables in the non-surveyed countries.

The intricacies of the survey procedure and the need for countries to be globally and regionally linked have raised a number of issues relating to data reporting and in the past have led to significant delays in generating PPP results. As a result of these concerns, some governments and international institutions still refrain from using PPPs in regular operational policy decisions, though they use the method extensively in their analyses.

The importance of PPPs in economic analysis underlines the need for improvements in PPP data. This requires both institutional and financial support. In collaboration with Eurostat and the Organisation for Economic Co-operation and Development, the World Bank has set up an initiative to further improve the quality and availability of PPPs.

BOX 3

The International Crime Victims Survey

The International Crime Victims Survey (ICVS) is a global programme of standardized surveys used to ask random samples of people about their experiences with crime and the police and their feelings of safety.

An international working group, jointly formed by the United Nations Interregional Crime and Justice Research Institute, the Dutch Ministry of Justice, the British Home Office and the Netherlands Institute for the Study of Criminality and Law Enforcement, is responsible for the conceptual and methodological development of the ICVS. The working group also coordinates with participating countries, develops and maintains the data sets, conducts analyses and disseminates the survey results.

Why is such a survey needed? There are two main reasons. First, measures of crime from other sources used in cross-country comparisons are often inadequate. Because the measures are based on police records, they can be greatly affected by differences among countries in how the police define, record

and count crimes. Indeed, many developing countries have no central registry of crimes, leaving the ICVS as the only source of information. Second, the survey may prompt participating countries to conduct research on crime and victimization and to develop crime and criminal justice policies based on this research.

The project started in 14 industrial countries in 1989. Since then, 71 countries have participated at least once, for a total of 145 surveys. In most of the participating countries in Asia, Africa, Latin America and Central and Eastern Europe the surveys were conducted in the capital city through face-to-face interviews of a sample of 1,000 people. In industrial countries the surveys were done nationwide by telephone, generally with a sample of 2,000 people.

The ICVS produces data on victimization for a number of crimes, including assault, robbery, bribery, sexual assault and property crimes. Results from the most recent surveys, conducted in the 1990s, are presented in table 20.

Source: Van Kesteren 2001.

The Report also recognizes new efforts in time use, functional literacy and health statistics. While the Report has featured time use surveys in previous years, recent improvements in survey methods and country coverage have provided a wealth of new information, stepping beyond traditional economic measurement and into the lives and livelihoods of the world's people. Results from these new time use surveys are being compiled, and the Human Development Report Office hopes to include them in next year's Report (box 4). Surveys of functional literacy allow a more in-depth look at a vital area of human development than conventional literacy surveys have offered (box 5). And new efforts by the World Health Organization to develop better measures of the performance of health systems will no doubt enhance the assessment of human development in the area of health in future *Human Development Reports* (box 6).

Despite these strides in measuring human development, many gaps and problems remain. Sufficient and reliable data are still lacking in many areas of human development. Gaps throughout the tables demonstrate the press-

ing need for improvements in both the quantity and the quality of human development statistics.

Perhaps the starkest demonstration of these data problems is the large number of countries excluded from the human development index (HDI)—and therefore from the main indicator tables. The intent is to include all UN member countries, along with Switzerland and Hong Kong, China (SAR), in the HDI exercise. But because of a lack of reliable data, this year 12 more countries could no longer be included in the calculation of the HDI, reducing the total to 162. That leaves 29 countries excluded from the main indicator tables. What key indicators are available for these countries are presented in table 28.

DATA USED IN THE HUMAN DEVELOPMENT INDEX

The human development index is calculated using international data available at the time the Report is prepared. For a country to be included in the index, data ideally should be available from the relevant international statistical agency for all four components of the index.

BOX 4

Time use surveys in developing countries

Conventional measures of productive activity focus on paid economic activity. But for a comprehensive picture of work and employment, especially the activities performed by women, it is essential to measure subsistence agriculture and other unpaid productive activities as well as unpaid housework. Time use surveys provide a unique means to collect data on such activities.

Until recently time use data were not included in the data collection programmes of developing countries' national statistical offices. Most time use studies in these countries were case studies of one or a few localities and did not cover a 24-hour day.

Following the recommendations of the Fourth World Conference on Women (held in Beijing in 1995), however, at least 24 countries in Asia, Africa and Latin America and the Caribbean have begun work on national time use surveys. Although geographically, economically and culturally diverse, all these countries have come to consider national time use surveys an important statistical tool for measuring and valuing women's and men's paid and unpaid work and for increasing the visibility of women's work both at home and in the labour

market. Some of the surveys (such as those in Benin, Chad, India and Oman and the pilot studies in Nigeria and South Africa) also aim to improve the collection of data on women's economic activities, especially in the informal sector. In India the objectives include using the data for skills training and for designing poverty eradication programmes.

A joint project of the United Nations Statistics Division, the United Nations Development Programme and Canada's International Development Research Centre provided technical assistance to many of these countries. The project also studied methods and classifications used in national time use surveys to determine which procedures are suitable for collecting time use data in developing countries. And the United Nations Statistics Division is developing a technical guide on data collection methods and a classification of time use statistics that can be adapted to both developing and industrial countries. The Statistics Division will also compile data from the studies conducted in developing countries since 1995. These data should be available for *Human Development Report 2002*.

Source: Prepared by the United Nations Statistics Division based on UN (2000a).

When data are missing for one component, a country will still be included if a reasonable estimate can be found from another source.

As a result of revisions in data and methodology over time, the HDI values and ranks are not comparable across editions of the Report. Table 2 in this year's Report presents comparable HDI trends based on a consistent methodology and data.

LIFE EXPECTANCY AT BIRTH

The life expectancy estimates used in the Report are from the 2000 revision of the United Nations Population Division's database *World Population Prospects* (UN 2001d). The United Nations Population Division derives global demographic estimates and projections biannually. In the 2000 revision it made significant adjustments to further incorporate the demographic impact of HIV/AIDS, which has led to substantial changes in life expectancy estimates

and projections for a number of countries, particularly in Sub-Saharan Africa.

The life expectancy estimates published by the United Nations Population Division are five-year averages. The life expectancy estimates for 1999 shown in table 1 (on the HDI) were obtained through linear interpolation based on these five-year averages. While the human development index requires yearly estimates, other tables showing data of this type, such as table 8 (on survival), present the unaltered five-year averages. Estimates for years after 2000 refer to medium-variant projections.

ADULT LITERACY

The adult literacy rates presented in the Report are estimates and projections from UNESCO's February 2000 literacy assessment. These estimates and projections are based on population data from the 1998 revision of the *World Population Prospects* database (UN 1998) and lit-

BOX 5

The International Adult Literacy Survey

The International Adult Literacy Survey (IALS) is the world's first international comparative assessment of adult literacy skills. The IALS study has combined household survey methods and educational assessment to provide comparable estimates of literacy skills for 24 countries. The survey tests representative samples of adults (aged 16–65) in their homes, asking them to undertake a range of common tasks using authentic materials from a wide range of social and cultural contexts. The IALS study is jointly sponsored by Statistics Canada, the US Center for Education Statistics and the Organisation for Economic Co-operation and Development (OECD).

While traditional measures of literacy focus primarily on the ability to decode the printed word, the IALS study defines literacy as the ability to understand and use printed information in daily activities at home, at work and in the community. It compiled the cross-country data to ensure that the results are comparable across countries with different languages and cultures and that any known sources of bias are corrected.

The IALS reports on three areas of literacy:

- *Prose literacy*—the knowledge and skills needed to understand and use information from texts, including editorials, news stories, poems and fiction.
- *Document literacy*—the knowledge and skills required to locate and use information in different formats, including maps, graphs, tables, payroll forms, job applications and transportation schedules.

Source: Murray 2001.

- *Quantitative literacy*—the knowledge and skills required to apply arithmetic operations to numbers in printed materials, such as balancing a cheque book, figuring out a tip, completing an order form or determining the amount of interest on a loan from an advertisement.

Analysis of IALS data reveals several important facts. First, countries differ greatly in the level and social distribution of literacy skills. Second, these differences can be attributed to a handful of underlying factors, including differences among countries in the quantity and quality of initial education. The evidence also suggests, however, that several aspects of adult life, including the use of literacy skills at home and at work, transform skills after formal education. Finally, in many countries literacy skills play an important part in allocating economic opportunity, rewarding the skilled and penalizing the relatively unskilled.

The IALS will begin a new cycle of data collection in 2002 to better understand the role of literacy skills in determining economic outcomes for individuals and, by extension, for nations. A full analysis of the currently available data can be found in OECD and Statistics Canada (2000).

This Report uses the percentage of adults lacking functional literacy skills, defined on the basis of prose literacy, in the human poverty index for selected OECD countries, presented in table 4.

eracy statistics collected through national population censuses, as well as refined estimation procedures.

COMBINED PRIMARY, SECONDARY AND TERTIARY GROSS ENROLMENT

The 1999 gross enrolment ratios presented in the Report are preliminary estimates from UNESCO based on the 1998 revision of population estimates and projections. Gross enrolment ratios are calculated by dividing the number of children enrolled in each level of schooling by the number of children in the age group corresponding to that level. Thus they are affected by the age- and sex-specific population estimates published by the United Nations Population Division and by the timing and methods of surveys by administrative registries, of population censuses and of national education surveys. Moreover, UNESCO periodically revises its methodology for estimating and projecting enrolment.

Gross enrolment ratios can hide important differences among countries because of differences in the age range corresponding to a level of education and in the duration of education programmes. Such factors as grade repetition can also lead to distortions in the data. For the HDI the preferred indicator of access to education as a proxy for knowledge would be net enrolment, for which data are collected for single years of age. Because this indicator measures enrolments only of a particular age group, the data could be more easily and reliably aggregated and used for international comparisons. But net enrolment data are available for too few countries to be used in the HDI.

GDP PER CAPITA (PPP US\$)

The GDP per capita (PPP US\$) data used in the HDI calculation are provided by the World Bank. The data are based on the latest International Comparison Programme (ICP) surveys, which cover 118 countries, the largest number ever in a round of ICP surveys. The World Bank has also provided estimates based on these surveys for another 44 countries and areas.

The surveys were carried out separately in different world regions. Because regional data

are expressed in different currencies and may be based on different classification schemes or aggregation formulas, the data are not strictly comparable across regions. Price and expenditure data from the regional surveys were linked using a standard classification scheme to compile internationally comparable PPP data. The base year for the PPP data is 1996; data for the reference year, 1999, were extrapolated using relative price movements over time between each country and the United States, the base country. For countries not covered by the World Bank, PPP estimates are from the Penn World Tables 6.0 (Aten, Heston and Summers 2001).

DATA, METHODOLOGY AND PRESENTATION OF THE HUMAN DEVELOPMENT INDICATORS

Building on improvements made in 2000, this year's Report presents data for most key indicators with only a two-year lag between the reference date for the indicators and the date of the Report's release. The definitions of statistical terms have been revised and expanded to include all indicators for which short, meaningful definitions can be given. In addition, the transparency of sources has been further improved. When an agency provides data it has collected from another source, both sources are credited in the table notes. But when an international statistical organization has built on the work of many other contributors, only the ultimate source is given. The source notes also show the original data components used in any calculations by the Human Development Report Office to ensure that all calculations can be easily replicated.

COUNTRY CLASSIFICATIONS

The indicator tables cover UN member countries, along with Switzerland and Hong Kong, China (SAR). Countries are classified in four ways: in major world aggregates, by region, by human development level and by income (see the classification of countries). These designations do not necessarily express a judgement about the development stage of a particular country or area. Instead, they are classifications used by different organizations for operational

purposes. The term *country* as used in the text and tables refers, as appropriate, to territories or areas.

Major world classifications. The three global groups are developing countries, Eastern Europe and the CIS and OECD. These groups are not mutually exclusive. (Replacing the OECD group with the high-income OECD group would produce mutually exclusive groups; see the classification of countries.) The classification *world* represents the universe of 162 countries covered in the main indicator tables.

Regional classifications. Developing countries are further classified into the following regions: Arab States, East Asia and the Pacific, Latin America and the Caribbean, South Asia, Southern Europe and Sub-Saharan Africa. These regional classifications are consistent with the Regional Bureaux of UNDP. An additional classification is least developed countries, as defined by the United Nations (and listed in UN 1996). Senegal was added to the list of least developed countries on 12 April 2001 but is not included in the aggregates for this group in this year's Report because the addition was made after the aggregates were finalized.

Human development classifications. All countries are classified into three clusters by achievement in human development: high human development (with an HDI of 0.800 or above), medium human development (0.500–0.799) and low human development (less than 0.500).

Income classifications. All countries are grouped by income using World Bank classifications: high income (GNP per capita of \$9,266 or more in 1999), middle income (\$756–9,265) and low income (\$755 or less).

AGGREGATES AND GROWTH RATES

Aggregates. Aggregates for the classifications described above are presented at the end of most tables. Aggregates that are the total for the classification (such as for population) are indicated by a T. As a result of rounding, aggregates for subgroups may not always sum to the world total. All other aggregates are weighted averages.

Unless otherwise specified, an aggregate is shown for a classification only when data are available for two-thirds of the countries and represent two-thirds of the available weight in that classification. The Human Development Report Office does not fill in missing data for the purpose of aggregation. Therefore, aggregates for each classification represent only the countries for which data are available and are shown in the tables. Aggregates are not shown where appropriate weighting procedures were unavailable.

Aggregates for indices, for growth rates and for indicators covering more than one point in time are based only on countries for which data exist for all necessary points in time. For the world classification, which refers only to the

BOX 6

A composite index measuring the performance of health systems

In a bold new initiative the World Health Organization has developed a composite index measuring the performance of health systems in 191 countries. According to *World Health Report 2000* (WHO 2000b), even without new medical technologies important advances can be made in health outcomes—just by improving the way currently available health interventions are organized and delivered. Differences in health outcomes between countries often reflect differences in the performance of their health systems. And differences in outcomes among groups within countries can often be attributed to disparities in the health services available to them.

A notable feature of the composite index is that it summarizes performance in terms of both the over-

all level of goal achievement and the distribution of that achievement, giving equal weight to these two aspects. Five components make up the index: overall good health, distribution of good health, overall responsiveness, distribution of responsiveness and fairness in financial contributions. Good health is measured by disability-adjusted life expectancy, and the distribution of good health by an equality of child survival index. The overall responsiveness of the health system and the distribution of responsiveness are measured on the basis of survey responses relating to respect for patients and client orientation. And fairness in financial contributions is estimated using the ratio of households' total spending on health to their permanent income above subsistence.

Source: Based on WHO (2000b).

universe of 162 countries, aggregates are not always shown where no aggregate is shown for one or more regions.

Aggregates in the *Human Development Report* will not always conform to those in other publications because of differences in country classifications and methodology. Where indicated, aggregates are calculated by the statistical agency that provides the indicator itself.

Growth rates. Multiyear growth rates are expressed as average annual rates of change. In calculations of rates by the Human Development Report Office, only the beginning and end points are used. Year-to-year growth rates are expressed as annual percentage changes.

PRESENTATION

In the indicator tables countries and areas are ranked in descending order by their HDI value. To locate a country in the tables, refer to the key to countries on the back cover flap, which lists countries alphabetically with their HDI rank.

Short citations of sources are given at the end of each table. These correspond to full references in the statistical references, which follow the indicator tables and technical notes. Where appropriate, definitions of indicators appear in the definitions of statistical terms. All other relevant information appears in the notes at the end of each table.

Owing to lack of comparable data, not all countries have been included in the indicator tables. For UN member countries not included in the main indicator tables, basic human development indicators are presented in a separate table.

In the absence of the words *annual*, *annual rate* or *growth rate*, a hyphen between two years indicates that the data were collected during one of the years shown, such as 1995-99. A slash between two years indicates an average for the years shown, such as 1996/98. The following signs have been used:

- .. Data not available.
- (.) Less than half the unit shown.
- < Less than.
- Not applicable.
- T Total.

Low income	59.4	61.8	51	1,910	0.57	0.58	0.49	0.549	-
World	66.7	.. ^o	65	6,980	0.70	0.74	0.71	0.716 ^o	-

Note: The human development index has been calculated for UN member countries with reliable data in each of its components, as well as for two non-members, Switzerland and Hong Kong, China (SAR). For data on the remaining 29 UN member countries see table 28.

a. The HDI rank is determined using HDI values to the fifth decimal point.

b. Preliminary UNESCO estimates, subject to further revision.

c. A positive figure indicates that the HDI rank is higher than the GDP per capita (PPP US\$) rank, a negative the opposite.

d. For purposes of calculating the HDI a value of 99.0% was applied.

e. For purposes of calculating the HDI a value of 100% was applied.

f. The ratio is an underestimate, as many secondary and tertiary students pursue their studies in nearby countries.

g. For purposes of calculating the HDI a value of \$40,000 (PPP US\$) was applied.

h. Excludes Turkish students and population.

i. Data refer to a year other than that specified.

j. Data refer to a year or period other than that specified, differ from the standard definition or refer to only part of a country.

k. UNICEF 2000.

l. Aten, Heston and Summers 2001.

m. UNESCO 2001a.

n. Human Development Report Office estimate based on national sources.

o. For purposes of calculating the HDI a value of 99.0% was applied for OECD countries for which data on adult literacy are missing. The resulting aggregates (97.5% for OECD countries, 98.8% for high-income OECD countries, 98.5% for high human development countries, 98.6% for high-income countries and 79.2% for the world) were used in obtaining the HDI aggregates.

Source: Column 1: UN 2001d; column 2: unless otherwise noted, UNESCO 2000a; column 3: UNESCO 2001b; column 4: unless otherwise noted, World Bank 2001b; aggregates calculated for the Human Development Report Office by the World Bank; column 5: calculated on the basis of data in column 1; column 6: calculated on the basis of data in columns 2 and 3; column 7: calculated on the basis of data in column 4; column 8: calculated on the basis of data in columns 5-7; see technical note 1 for details; column 9: calculated on the basis of data in columns 4 and 8.

162	Sierra Leone	51.6	..	72	29 ^d	57.0	68.0	..

Note: As a result of revisions in data and methodology, the HPI-1 results in this table are not comparable to those in *Human Development Report 2000*. For further details see technical note 1. The human poverty index has been calculated for UN member countries with reliable data in each of its components, which include Afghanistan (HPI-1 value, 60.2%; HPI-1 rank, 89) and Cuba (HPI-1 value, 4.6%; HPI-1 rank, 4).

a. Data refer to the probability at birth of not surviving to age 40, times 100. Data refer to estimates for the period specified.

b. Data refer to the most recent year available during the period specified.

c. Income poverty refers to the percentage of the population living on less than \$1 (PPP US\$) a day. The rankings are based on countries with available data for both indicators. A positive figure indicates that the country performs better in income poverty than in human poverty, a negative the opposite.

d. Data refer to a year or period other than that specified, differ from the standard definition or refer to only part of a country.

e. UNESCO 2001a.

Source: *Column 1*: determined on the basis of the HPI-1 values in column 2; *column 2*: calculated on the basis of data in columns 3-6; see technical note 1 for details; *column 3*: UN 2001d; *column 4*: unless otherwise noted, UNESCO 2000a; *column 5*: calculated on the basis of data on population using improved water sources from UNICEF (2000); *column 6*: UNICEF 2000; *columns 7 and 8*: World Bank 2001b; *column 9*: calculated on the basis of data in columns 1 and 7.

98	Moldova, Rep. of	27.4	66	..
99	Uzbekistan	23.9	63	..
103	Tajikistan	25.3

Note: This table includes Israel and Malta, which are not OECD member countries, but excludes the Republic of Korea, Mexico and Turkey, which are. For the human poverty index and related indicators for these countries see table 3.

a. Data refer to the probability at birth of not surviving to age 60, times 100. Data refer to estimates for the period specified.

b. Based on scoring at level 1 on the prose literacy scale of the International Adult Literacy Survey (see box 5 in the note on statistics). Data refer to the most recent year available during 1994-98.

c. Data refer to unemployment lasting 12 months or longer.

d. Poverty line is measured at 50% of equivalent median disposable household income.

e. Data refer to the most recent year available during the period specified.

f. Based on the US poverty line, \$11 (1994 PPP US\$) a day per person for a family of three.

g. Income poverty refers to the percentage of the population living on less than \$11 (1994 PPP US\$) a day per person for a family of three. A positive figure indicates that the country performs better in income poverty than in human poverty, a negative the opposite.

h. Data refer to 1998.

i. Data refer to Flanders.

j. For purposes of calculating the HPI-2 an estimate of 15.1%, the unweighted average for countries with available data, was applied.

k. Smeeding 1997.

l. Data refer to 1997.

Source: Column 1: determined on the basis of the HPI-2 values in column 2; column 2: calculated on the basis of data in columns 3-6; see technical note 1 for details; column 3: UN 2001d; column 4: unless otherwise noted, OECD and Statistics Canada 2000; column 5: OECD 2000c; column 6: unless otherwise noted, LIS 2001; column 7: Smeeding, Rainwater and Burtless 2000; column 8: Milanovic 1998; column 9: calculated on the basis of data in columns 1 and 7.

Note: The estimates and projections in columns 1-5 and 9-14 are based on the 2000 revision of the database *World Population Prospects 1950-2050* (UN 2001d), which explicitly incorporates the impact of HIV/AIDS in 45 highly affected countries, up from 34 in the 1998 revision (UN 1998). These 45 countries are Angola, the Bahamas, Benin, Botswana, Brazil, Burkina Faso, Burundi, Cambodia, Cameroon, the Central African Republic, Chad, Congo, the Democratic Republic of the Congo, Côte d'Ivoire, Djibouti, the Dominican Republic, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea-Bissau, Guyana, Haiti, Honduras, India, Kenya, Lesotho, Liberia, Malawi, Mali, Mozambique, Myanmar, Namibia, Nigeria, Rwanda, Sierra Leone, South Africa, Swaziland, the United Republic of Tanzania, Thailand, Togo, Uganda, Zambia and Zimbabwe.

a. Because data are based on national definitions of what constitutes a city or metropolitan area, cross-country comparisons should be made with caution.

b. Data refer to medium-variant projections.

c. Data refer to estimates for the period specified.

d. Population estimates include Taiwan, province of China.

Source: Columns 1-3, 13 and 14: UN 2001d; column 4: calculated on the basis of data in columns 1 and 2; column 5: calculated on the basis of data in columns 2 and 3; columns 6 and 8: UN 2000b; column 7: calculated on the basis of data on urban and total population from UN (2000b); columns 9 and 10: calculated on the basis of data on population under age 15 and total population from UN (2001d); columns 11 and 12: calculated on the basis of data on population aged 65 and above and total population from UN (2001d).

6 Commitment to health: access, services and resources

... TO LEAD A LONG AND HEALTHY LIFE ...

a. The data on access to essential drugs are based on statistical estimates received from World Health Organization (WHO) country and regional offices and regional advisers and through the World Drug Situation Survey carried out in 1998-99. These estimates represent the best information available to the WHO Department of Essential Drugs and Medicines Policy to date and are currently being validated by WHO member states. The department assigns the estimates to four groupings: very low access (0-49%), low access (50-79%), medium access (80-94%) and good access (95% or more). These groupings are often used by the WHO in interpreting the data, as the percentage estimates may suggest a higher level of accuracy than the data afford.

b. Data refer to the most recent year available during the period specified.

c. Data refer to married women aged 15-49, but the age range covered may vary across countries.

d. Definitions of skilled health staff may vary across countries. Data refer to the most recent year available during the period specified or to a running average for a series of years surrounding that period.

e. Data refer to 1999.

f. Data refer to a year or period other than that specified, differ from the standard definition or refer to only part of a country.

g. Data refer to the survey period 1994-95.

a. Data refer to the most recent year available during the period specified.

b. Data refer to the end of 1999. Aggregates are rounded estimates; regional totals may not sum to the world total.

c. Data refer to malaria cases reported to the World Health Organization and may represent only a fraction of the true number in a country because of incomplete reporting systems or incomplete health service coverage, or both. Because of the diversity of case detection and reporting systems, country comparisons should be made with caution. Data refer to the end of 1997.

d. Data refer to tuberculosis cases notified to the World Health Organization and may represent only a fraction of the true number in a country because of incomplete coverage by health services, inaccurate diagnosis or deficient recording and reporting.

e. Data refer to estimates of apparent consumption based on data on cigarette production, imports and exports. Such estimates may under- or overstate true consumption in countries where tobacco products are illegally imported or exported, where there is significant stockpiling of cigarettes or where there are large transient populations. Estimates of apparent consumption cannot provide insights into smoking patterns in a population. Data refer to the most recent three-year moving average available during the period specified.

f. Data refer to a year or period other than that specified, differ from the standard definition or refer to only part of a country.

g. Data refer to 1996.

h. Includes Luxembourg.

i. Data refer to 1997.

j. Data refer to estimates produced using the 1994 prevalence rate published by the World Health Organization's Global Programme on AIDS (WHO 1995).

Source: Column 1: FAO 2000; columns 2-4: UNICEF 2000; columns 5-7: UNAIDS 2000; aggregates calculated for the Human Development Report Office by UNAIDS; column 8: WHO 1999; column 9: WHO 2000a; column 10: WHO 2001b.

a. Data refer to the probability at birth of surviving to age 65, times 100.

b. Data refer to estimates for the period specified.

c. The maternal mortality data are those reported by national authorities. UNICEF and the World Health Organization periodically evaluate these data and make adjustments to account for the well-documented problems of underreporting and misclassification of maternal deaths and to develop estimates for countries with no data (for details on the most recent estimates see Hill, Abouzahr and Wardlaw 2001). Data refer to the most recent year available during the period specified.

Note: As a result of a number of limitations in the data, comparisons of education expenditure data over time and across countries should be made with caution. For detailed notes on the data see UNESCO (1999).

a. Data refer to total public expenditure on education, including current and capital expenditures. See the definitions of statistical terms.

b. Data refer to current public expenditures on education. Expenditures by level may not sum to 100 as a result of rounding or the omission of the categories "other types" and "not distributed".

c. Data refer to the most recent year available during the period specified.

d. Data may not be strictly comparable to those for earlier years as a result of methodological changes.

e. Expenditures previously classified as "other types" have been distributed across the different education levels.

f. Data refer to combined expenditures for pre-primary, primary and secondary levels.

g. Data refer to a year or period other than that specified.

h. Data include capital expenditures.

i. Data refer to the ministry of education only.

j. Data refer to the Flemish community only.

k. Data refer to the Office of Greek Education only.

l. Data do not include expenditures on tertiary education.

m. Data do not include expenditures on mid-level specialized colleges and technical schools.

n. Data refer to the central government only.

a. Data refer to the most recent year available during the period specified.

b. Index is calculated on the basis of the latest data available during the period specified.

c. Aggregates differ slightly from those in table 1, as only literacy data from UNESCO are presented in this table.

Source: Column 1: UNESCO 2000a; column 2: calculated on the basis of data on adult literacy rates from UNESCO (2000a); column 3: UNESCO 2000c; column 4: calculated on the basis of data on youth literacy rates from UNESCO (2000c); columns 5 and 7: UNESCO 2001c; column 6: calculated on the basis of data on net primary enrolment ratios from UNESCO (2001c); column 8: calculated on the basis of data on net secondary enrolment ratios from UNESCO (2001c); column 9: UNESCO 1999; column 10: calculated on the basis of data on tertiary students from UNESCO (1999).

a. Data may refer to a period shorter than that specified where data are not available for all years.

b. In theory, for the United States the value of GDP in PPP US dollars should be the same as that in US dollars, but practical issues arising in the creation of the PPP US dollar GDP series prevent this.

c. Data refer to a period other than that specified.

d. Data refer to 1998.

Source: Columns 1-3: World Bank 2001b; aggregates calculated for the Human Development Report Office by the World Bank; columns 4 and 5: World Bank 2001a; aggregates calculated for the Human Development Report Office by the World Bank; columns 6 and 7: calculated on the basis of data on GDP at market prices (constant 1995 US\$), population and GDP per capita (PPP US\$) from World Bank (2001b); column 8: calculated for the Human Development Report Office by the World Bank on the basis of data on the consumer price index from World Bank (2001b); column 9: calculated on the basis of data on the consumer price index from World Bank (2001b).

Note: Because data come from surveys covering different years and using different methodologies, comparisons between countries must be made with caution.

a. The distribution of income is typically more unequal than the distribution of consumption, as poor people generally consume a greater proportion of their income than rich people do.

b. Data show the ratio of the income or consumption share of the richest group to that of the poorest. Because of rounding, results may differ from ratios calculated using the income or consumption shares in columns 3-6.

c. The Gini index measures inequality over the entire distribution of income or consumption. A value of 0 represents perfect equality, and a value of 100 perfect inequality.

Source: Columns 1-6 and 9: World Bank 2001b; columns 7 and 8: calculated on the basis of income or consumption data from World Bank (2001b).

a. The ratio of the export price index to the import price index measured relative to the base year 1980. A value of more than 100 implies that the price of exports has risen relative to the price of imports.

b. Data refer to 1999.

c. Data refer to 1998.

d. Data include Luxembourg.

e. Data refer to 1997.

f. Data refer to the South African Customs Union, which comprises Botswana, Lesotho, Namibia, South Africa and Swaziland.

Source: Columns 1-4, 7 and 8: World Bank 2001b; aggregates calculated for the Human Development Report Office by the World Bank; columns 5 and 6: calculated on the basis of data on merchandise trade and exports of food, agricultural raw materials, fuels, ores and metals from World Bank (2001b); aggregates calculated for the Human Development Report Office by the World Bank; columns 9 and 10: calculated on the basis of data on high-technology exports from UN (2001a) and data on manufactured and merchandise exports from World Bank (2001b); column 11: calculated on the basis of data on terms of trade from World Bank (2001b).

Note: DAC is the Development Assistance Committee of the Organisation for Economic Co-operation and Development (OECD). Greece joined DAC in December 1999.

a. Some non-DAC countries and areas also provide ODA. According to OECD, Development Assistance Committee (2001c), net ODA disbursed in 1999 by the Czech Republic, Estonia, the Republic of Korea, Kuwait, Poland, Saudi Arabia, Turkey and the United Arab Emirates totalled \$777 million. China also provides aid but does not disclose the amount.

b. Including imputed multilateral flows that make allowance for contributions through multilateral organizations. These are calculated using the geographic distribution of disbursements for the year of reference.

c. Does not include disbursements from non-governmental organizations (NGOs) that originate from official sources and are already included in ODA.

d. Aggregates are from OECD, Development Assistance Committee (2001a and 2001c).

Source: Columns 1-7: OECD, Development Assistance Committee 2001c; columns 8 and 9: OECD, Development Assistance Committee 2001a.

Note: This table presents data for countries included in Parts I and II of DAC's list of aid recipients (OECD, Development Assistance Committee 2001d). The denominator conventionally used when comparing official development assistance and total debt service with the size of the economy is GNP, not GDP (see the definitions of statistical terms). GDP is used here, however, to allow comparability throughout the table. With few exceptions, the denominators produce similar results.

- a. ODA receipts are total net ODA flows from DAC countries, multilateral organizations and Arab states. A negative value indicates that the repayment of ODA loans exceeds the amount of ODA received.
b. A negative value indicates that the capital flowing out of the country exceeds that flowing in.
c. Other private flows combine non-debt-creating portfolio equity investment flows, portfolio debt flows and bank and trade-related lending. See the definitions of statistical terms.
d. Data refer to net official aid. See the definitions of statistical terms.
e. Data refer to 1998.

Source: Column 1: OECD, Development Assistance Committee 2001b; column 2: calculated on the basis of data on ODA from OECD, Development Assistance Committee (2001b) and data on population from World Bank (2001b); columns 3 and 4: calculated on the basis of data on ODA from OECD, Development Assistance Committee (2001b) and data on GDP from World Bank (2001b); columns 5 and 6: calculated on the basis of data on foreign direct investment and GDP from World Bank (2001b); aggregates calculated for the Human Development Report Office by the World Bank; columns 7 and 8: calculated on the basis of data on portfolio investment (bonds and equity), bank and trade-related lending and GDP from World Bank (2001b); aggregates calculated for the Human Development Report Office by the World Bank; columns 9 and 10: calculated on the basis of data on total debt service and GDP from World Bank (2001b); aggregates calculated for the Human Development Report Office by the World Bank; columns 11 and 12: World Bank 2001b; aggregates calculated for the Human Development Report Office by the World Bank.

162 Sierra Leone	1.7	0.9	0.9	1.6	2.4	3.2

Note: The denominator conventionally used when comparing expenditures and debt with the size of the economy is GNP, not GDP (see the definitions of statistical terms). GDP is used here wherever possible, however, to allow comparability throughout the table. With few exceptions the denominators produce similar results.

a. As a result of a number of limitations in the data, comparisons of military expenditure data over time and across countries should be made with caution. For detailed notes on the data see SIPRI (2000).

b. For aggregates see table 15.

c. Data refer to the most recent year available during the period specified.

d. Data are not strictly comparable to those for earlier years as a result of methodological changes in surveys.

e. Data refer to a year or period other than that specified.

f. Data refer to 1999.

g. Data refer to the ministry of education only.

h. Data refer to the Flemish community only.

i. Data refer to the Federal Republic of Germany before unification.

j. Data refer to the Office of Greek Education only.

k. Data refer to 1998.

l. Data refer to 1991.

m. Data refer to 1997.

n. Data refer to the former Soviet Union.

o. Data do not include expenditure on tertiary education.

p. Data refer to the central government only.

q. These data should be interpreted in the light of the highly uncertain economic statistics resulting from the impact of war on the Angolan economy.

● Ratification, acceptance, approval, accession or succession.

○ Signature.

a. Information is as of 30 March 2001. The United Nations Framework Convention on Climate Change was signed in New York in 1992, the Kyoto Protocol to the United Nations Framework Convention on Climate Change in Kyoto in 1997, the Vienna Convention for the Protection of the Ozone Layer in Vienna in 1985 and the Convention on Biological Diversity in Rio de Janeiro in 1992.

b. Has not yet entered into force.

c. The world total is less than 100% because of the omission of data for countries not reported on and because the global total used in this calculation includes other emissions not included in national totals, such as emissions from bunker fuels and oxidation of non-fuel hydrocarbon products.

Source: *Columns 1 and 2*: World Bank 2001b, based on data from the United Nations Statistics Division; aggregates calculated for the Human Development Report Office by the World Bank; *columns 3-6*: World Bank 2001b; aggregates calculated for the Human Development Report Office by the World Bank; *column 7*: calculated on the basis of data on carbon dioxide emissions from CDIAC (2000); *column 8*: calculated on the basis of data on carbon dioxide emissions from CDIAC (2000) and data on population from UN (1998); *columns 9-12*: UN 2001b.

a. Data refer to the end of 1999. They do not include Palestinian refugees.

b. Figures are trend indicator values, which are an indicator only of the volume of international arms transfers, not of the actual financial value of such transfers. Published reports of arms transfers provide partial information, as not all transfers are fully reported. The estimates presented are conservative and may understate actual transfers of conventional weapons.

c. Includes only those to whom the United Nations High Commissioner for Refugees (UNHCR) extends assistance in pursuance to a special request by a competent organ of the United Nations.

d. The country of origin for many refugees is unavailable or unreported. These data may therefore be underestimates.

e. Calculated using the 1995-99 totals for all countries and non-state actors with exports of major conventional weapons as defined in SIPRI (2000).

f. The aggregate is from UNHCR (2000).

Source: Columns 1-3: UNHCR 2000; columns 4 and 6: SIPRI 2000; columns 5 and 7: calculated on the basis of data on weapons transfers from SIPRI (2000); column 8: IISS 2000; column 9: calculated on the basis of data on armed forces from IISS (2000).

Note: Data are from the International Crime Victims Survey (see box 3 in the note on statistics).

a. Data refer to reported victimization.

b. Surveys were conducted in 1992, 1995, 1996/97 and 2000. Data refer to the year preceding the survey.

c. Data refer to 11 crimes recorded in the survey: robbery, burglary, attempted burglary, car theft, car vandalism, bicycle theft, sexual assault, theft from car, theft of personal property, assault and threats and theft of motorcycle or moped.

d. Includes car theft, theft from car, burglary with entry and attempted burglary.

e. Data refer to female population only.

f. Data refer to people who have been asked or expected to pay a bribe by a government official.

g. Data refer to 1995.

162	Sierra Leone	39.6	37.0	21	32

a. Preliminary UNESCO estimates, subject to further revision.

b. Because of the lack of gender-disaggregated income data, female and male earned income are crudely estimated on the basis of data on the ratio of the female non-agricultural wage to the male non-agricultural wage, the female and male shares of the economically active population, the total female and male population and GDP per capita (PPP US\$) (see technical note 1). Unless otherwise specified, estimates are based on data for the latest year available during 1994-99.

c. The HDI ranks used in this column are those recalculated for the 146 countries with a GDI value. A positive figure indicates that the GDI rank is higher than the HDI rank, a negative the opposite.

d. For purposes of calculating the GDI a value of 99.0% was applied.

e. No wage data available. For purposes of calculating the estimated female and male earned income, an estimate of 75%, the unweighted average for the countries with available data, was used for the ratio of the female non-agricultural wage to the male non-agricultural wage.

f. For purposes of calculating the GDI a value of 100.0% was applied.

g. The ratio is an underestimate, as many secondary and tertiary students pursue their studies in nearby countries.

h. For purposes of calculating the GDI a value of \$40,000 (PPP US\$) was applied.

i. Excludes Turkish students and population.

j. Calculated on the basis of GDP per capita (PPP US\$) data from Aten, Heston and Summers 2001.

k. UNESCO 2001a.

Source: *Column 1*: determined on the basis of the GDI values in column 2; *column 2*: calculated on the basis of data in columns 3-10; see technical note 1 for details; *columns 3 and 4*: UN 2001d; *columns 5 and 6*: unless otherwise noted, UNESCO 2000a; *columns 7 and 8*: UNESCO 2001b; *columns 9 and 10*: unless otherwise noted, calculated on the basis of data on GDP per capita (PPP US\$) from World Bank (2001b), data on wages from ILO (2001c), data on the economically active population from ILO (1996) and data on population from UN (2001d); *column 11*: determined on the basis of the recalculated HDI ranks and the GDI ranks in column 1.

a. Data are as of 8 March 2001.

b. Data refer to the latest year available during the period 1990-99.

c. Calculated on the basis of data in columns 9 and 10 in table 21. Estimates are based on data for the latest year available during the period 1994-99.

d. Data are based on the International Standard Classification of Occupations (ISCO-68) as defined in ILO (2001c).

e. Calculated on the basis of the 54 permanent seats (that is, excluding the 36 special rotating delegates appointed on an ad hoc basis).

Source: *Column 1*: determined on the basis of the GEM values in column 2; *column 2*: calculated on the basis of data in columns 3-5 in this table and in columns 9 and 10 in table 21 (see technical note 1 for details); *column 3*: calculated on the basis of data on parliamentary seats from IPU (2001c); *columns 4 and 5*: calculated on the basis of occupational data from ILO (2001c); *column 6*: calculated on the basis of data in columns 9 and 10 in table 21.

a. Tertiary enrolment is generally calculated as a gross ratio.

b. Data refer to the most recent year available during the period specified.

c. The ratio is an underestimate, as many students pursue their studies in nearby countries.

d. Excludes Turkish institutions.

Source: *Column 1*: UNESCO 2000a; *column 2*: calculated on the basis of data on adult literacy rates from UNESCO (2000a); *column 3*: UNESCO 2000c; *column 4*: calculated on the basis of data on youth literacy rates from UNESCO (2000c); *columns 5 and 7*: UNESCO 2001c; *column 6*: calculated on the basis of data on net primary enrolment ratios from UNESCO (2001c); *column 8*: calculated on the basis of data on net secondary enrolment ratios from UNESCO (2001c); *columns 9 and 10*: UNESCO 1999.

Note: As a result of a number of limitations in the data, comparisons of labour statistics over time and across countries should be made with caution. For detailed notes on the data see ILO (1996, 1999 and 2001c). The percentage shares of employment by economic activity may not sum to 100 because of rounding or the omission of activities not classified.

a. Data refer to the most recent year available during the period specified.

Source: Columns 1-3: calculated on the basis of data on the economically active population and total population from ILO (1996); columns 4-9: ILO 2001a; columns 10 and 11: calculated on the basis of data on contributing family workers from ILO (2001c).

162	Sierra Leone	1961	1961	..	8.1	8.8	–

a. Data refer to the year in which the right to vote or stand for election on a universal and equal basis was recognized. Where two years are shown, the first refers to the first partial recognition of the right to vote or stand for election.

b. Data were provided by states based on their definition of national executive and may therefore include women serving as ministers and vice ministers and those holding other ministerial positions, including parliamentary secretaries.

c. Data are as of 8 March 2001.

d. No information is available on the year all women received the right to stand for election. However, the constitution does not mention gender with regard to this right.

e. Refers to the year women were elected to the current parliamentary system.

f. Women's right to vote and to stand for election has not been recognized. Brunei Darussalam, Oman, Qatar and Saudi Arabia have never had a parliament.

g. According to the constitution in force (1973), all citizens are equal before the law; however, women were not able to exercise electoral rights in the only legislative elections held in Bahrain, in 1973. The first legislature of Bahrain was dissolved by decree of the emir on 26 August 1975. Women were allowed to vote in the referendum of 14-15 February 2001, however, which approved the National Action Charter.

h. Calculated on the basis of the 54 permanent seats (that is, excluding the 36 special rotating delegates appointed on an ad hoc basis).

i. No information or confirmation available.

j. Refers to the former People's Democratic Republic of Yemen.

k. The country has not yet elected or appointed a woman to the national parliament.

CALCULATING THE HUMAN DEVELOPMENT INDICES

The diagrams here offer a clear overview of how the five human development indices used in the *Human Development Report* are constructed, highlighting both their similarities and their differences. The text on the following pages provides a detailed explanation.

The human development index (HDI)

The HDI is a summary measure of human development. It measures the average achievements in a country in three basic dimensions of human development:

- A long and healthy life, as measured by life expectancy at birth.
- Knowledge, as measured by the adult literacy rate (with two-thirds weight) and the combined primary, secondary and tertiary gross enrolment ratio (with one-third weight).
- A decent standard of living, as measured by GDP per capita (PPP US\$).

Before the HDI itself is calculated, an index needs to be created for each of these dimensions. To calculate these dimension indices—the life expectancy, education and GDP indices—minimum and maximum values (goalposts) are chosen for each underlying indicator.

Performance in each dimension is expressed as a value between 0 and 1 by applying the following general formula:

$$\text{Dimension index} = \frac{\text{actual value} - \text{minimum value}}{\text{maximum value} - \text{minimum value}}$$

The HDI is then calculated as a simple average of the dimension indices. The box at right illustrates the calculation of the HDI for a sample country.

Goalposts for calculating the HDI

Indicator	Maximum value	Minimum value
Life expectancy at birth (years)	85	25
Adult literacy rate (%)	100	0
Combined gross enrolment ratio (%)	100	0
GDP per capita (PPP US\$)	40,000	100

Calculating the HDI

This illustration of the calculation of the HDI uses data for Armenia.

1. Calculating the life expectancy index

The life expectancy index measures the relative achievement of a country in life expectancy at birth. For Armenia, with a life expectancy of 72.7 years in 1999, the life expectancy index is 0.795.

$$\text{Life expectancy index} = \frac{72.7 - 25}{85 - 25} = 0.795$$

2. Calculating the education index

The education index measures a country's relative achievement in both adult literacy and combined primary, secondary and tertiary gross enrolment. First, an index for adult literacy and one for combined gross enrolment are calculated. Then these two indices are combined to create the education index, with two-thirds weight given to adult literacy and one-third weight to combined gross enrolment. For Armenia, with an adult literacy rate of 98.3% and a combined gross enrolment ratio of 79.9% in 1999, the education index is 0.922.

$$\text{Adult literacy index} = \frac{98.3 - 0}{100 - 0} = 0.983$$

$$\text{Gross enrolment index} = \frac{79.9 - 0}{100 - 0} = 0.799$$

$$\begin{aligned} \text{Education index} &= 2/3 (\text{adult literacy index}) + 1/3 (\text{gross enrolment index}) \\ &= 2/3 (0.983) + 1/3 (0.799) = 0.922 \end{aligned}$$

3. Calculating the GDP index

The GDP index is calculated using adjusted GDP per capita (PPP US\$). In the HDI income serves as a surrogate for all the dimensions of human development not reflected in a long and healthy life and in knowledge. Income is adjusted because achieving a respectable level of human development does not require unlimited income. Accordingly, the logarithm of income is used. For Armenia, with a GDP per capita of \$2,215 (PPP US\$) in 1998, the GDP index is 0.517.

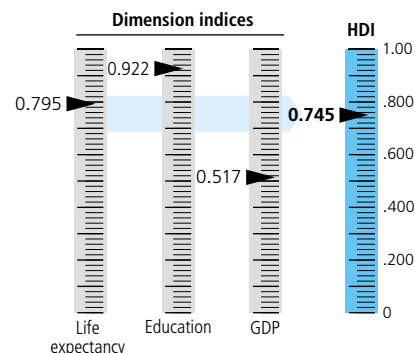

$$\text{GDP index} = \frac{\log(2,215) - \log(100)}{\log(40,000) - \log(100)} = 0.517$$

4. Calculating the HDI

Once the dimension indices have been calculated, determining the HDI is straightforward. It is a simple average of the three dimension indices.

$$\begin{aligned} \text{HDI} &= 1/3 (\text{life expectancy index}) + 1/3 (\text{education index}) \\ &\quad + 1/3 (\text{GDP index}) \\ &= 1/3 (0.795) + 1/3 (0.922) + 1/3 (0.517) = 0.745 \end{aligned}$$

The human poverty index for developing countries (HPI-1)

While the HDI measures average achievement, the HPI-1 measures *deprivations* in the three basic dimensions of human development captured in the HDI:

- A long and healthy life—vulnerability to death at a relatively early age, as measured by the probability at birth of not surviving to age 40.
- Knowledge—exclusion from the world of reading and communications, as measured by the adult illiteracy rate.
- A decent standard of living—lack of access to overall economic provisioning, as measured by the percentage of the population not using improved water sources and the percentage of children under five who are underweight.

Calculating the HPI-1 is more straightforward than calculating the HDI. The indicators used to measure the deprivations are already normalized between 0 and 100 (because they are expressed as percentages), so there is no need to create dimension indices as for the HDI.

In this year's Report, because reliable data on access to health services are lacking for recent years, deprivation in a decent standard of living is measured by two rather than three indicators—the percentage of the population not using improved water sources and the percentage of children under five who are underweight. An unweighted average of the two is used as an input to the HPI-1.

The human poverty index for selected OECD countries (HPI-2)

The HPI-2 measures deprivations in the same dimensions as the HPI-1 and also captures social exclusion. Thus it reflects deprivations in four dimensions:

- A long and healthy life—vulnerability to death at a relatively early age, as measured by the probability at birth of not surviving to age 60.
- Knowledge—exclusion from the world of reading and communications, as measured by the percentage of adults (aged 16–65) lacking functional literacy skills.
- A decent standard of living—as measured by the percentage of people living below the income poverty line (50% of the median disposable household income).
- Social exclusion—as measured by the rate of long-term unemployment (12 months or more).

Calculating the HPI-1

1. Measuring deprivation in a decent standard of living

An unweighted average of two indicators is used to measure deprivation in a decent standard of living.

$$\text{Unweighted average} = 1/2 (\text{population not using improved water sources}) + 1/2 (\text{underweight children under five})$$

A sample calculation: the Dominican Republic

Population not using improved water sources = 21%
Underweight children under five = 6%

$$\text{Unweighted average} = 1/2 (21) + 1/2 (6) = 13.5\%$$

2. Calculating the HPI-1

The formula for calculating the HPI-1 is as follows:

$$\text{HPI-1} = [1/3 (P_1^\alpha + P_2^\alpha + P_3^\alpha)]^{1/\alpha}$$

Where:

P_1 = Probability at birth of not surviving to age 40 (times 100)

P_2 = Adult illiteracy rate

P_3 = Unweighted average of population not using improved water sources and underweight children under age five

$\alpha = 3$

A sample calculation: the Dominican Republic

$P_1 = 11.9\%$

$P_2 = 16.8\%$

$P_3 = 13.5\%$

$$\text{HPI-1} = [1/3 (11.9^3 + 16.8^3 + 13.5^3)]^{1/3} = 14.4$$

Calculating the HPI-2

The formula for calculating the HPI-2 is as follows:

$$\text{HPI-2} = [1/4 (P_1^\alpha + P_2^\alpha + P_3^\alpha + P_4^\alpha)]^{1/\alpha}$$

Where:

P_1 = Probability at birth of not surviving to age 60 (times 100)

P_2 = Adults lacking functional literacy skills

P_3 = Population below income poverty line (50% of median disposable household income)

P_4 = Long-term unemployment rate (lasting 12 months or more)

$\alpha = 3$

A sample calculation: Australia

$P_1 = 9.1\%$

$P_2 = 17.0\%$

$P_3 = 2.1\%$

$P_4 = 14.3\%$

$$\text{HPI-2} = [1/4 (9.1^3 + 17.0^3 + 2.1^3 + 14.3^3)]^{1/3} = 12.9$$

Why $\alpha = 3$ in calculating the HPI-1 and HPI-2

The value of α has an important impact on the value of the HPI. If $\alpha = 1$, the HPI is the average of its dimensions. As α rises, greater weight is given to the dimension in which there is the most deprivation. Thus as α increases towards infinity, the HPI will tend towards the value of the dimension in which deprivation is greatest (for the Dominican Republic, the example used for calculating the HPI-1, it would be 16.8%, equal to the adult illiteracy rate).

In this Report the value 3 is used to give additional but not overwhelming weight to areas of more acute deprivation. For a detailed analysis of the HPI's mathematical formulation see Sudhir Anand and Amartya Sen's "Concepts of Human Development and Poverty: A Multidimensional Perspective" and the technical note in *Human Development Report 1997* (see the list of selected readings at the end of this technical note).

The gender-related development index (GDI)

While the HDI measures average achievement, the GDI adjusts the average achievement to reflect the *inequalities* between men and women in the following dimensions:

- A long and healthy life, as measured by life expectancy at birth.
- Knowledge, as measured by the adult literacy rate and the combined primary, secondary and tertiary gross enrolment ratio.
- A decent standard of living, as measured by estimated earned income (PPP US\$).

The calculation of the GDI involves three steps. First, female and male indices in each dimension are calculated according to this general formula:

$$\text{Dimension index} = \frac{\text{actual value} - \text{minimum value}}{\text{maximum value} - \text{minimum value}}$$

Second, the female and male indices in each dimension are combined in a way that penalizes differences in achievement between men and women. The resulting index, referred to as the equally distributed index, is calculated according to this general formula:

$$\begin{aligned} \text{Equally distributed index} \\ = & \{[\text{female population share} (\text{female index}^{-\epsilon})] \\ & + [\text{male population share} (\text{male index}^{-\epsilon})]\}^{1/\epsilon} \end{aligned}$$

ϵ measures the aversion to inequality. In the GDI $\epsilon = 2$. Thus the general equation becomes:

$$\begin{aligned} \text{Equally distributed index} \\ = & \{[\text{female population share} (\text{female index}^{-1})] \\ & + [\text{male population share} (\text{male index}^{-1})]\}^{-1} \end{aligned}$$

which gives the harmonic mean of the female and male indices.

Third, the GDI is calculated by combining the three equally distributed indices in an unweighted average.

Goalposts for calculating the GDI

Indicator	Maximum value	Minimum value
Female life expectancy at birth (years)	87.5	27.5
Male life expectancy at birth (years)	82.5	22.5
Adult literacy rate (%)	100	0
Combined gross enrolment ratio (%)	100	0
Estimated earned income (PPP US\$)	40,000	100

Note: The maximum and minimum values (goalposts) for life expectancy are five years higher for women to take into account their longer life expectancy.

Calculating the GDI

This illustration of the calculation of the GDI uses data for Israel.

1. Calculating the equally distributed life expectancy index

The first step is to calculate separate indices for female and male achievements in life expectancy, using the general formula for dimension indices.

FEMALE	MALE
Life expectancy: 80.4 years	Life expectancy: 76.6 years
Life expectancy index = $\frac{80.4 - 27.5}{87.5 - 27.5} = 0.882$	Life expectancy index = $\frac{76.6 - 22.5}{82.5 - 22.5} = 0.902$

Next, the female and male indices are combined to create the equally distributed life expectancy index, using the general formula for equally distributed indices.

FEMALE	MALE
Population share: 0.507	Population share: 0.493
Life expectancy index: 0.882	Life expectancy index: 0.902
Equally distributed life expectancy index = $\{[0.507 (0.882^{-1})] + [0.493 (0.902^{-1})]\}^{-1} = 0.891$	

2. Calculating the equally distributed education index

First, indices for the adult literacy rate and the combined primary, secondary and tertiary gross enrolment ratio are calculated separately for females and males. Calculating these indices is straightforward, since the indicators used are already normalized between 0 and 100.

FEMALE	MALE
Adult literacy rate: 93.9%	Adult literacy rate: 97.8%
Adult literacy index: 0.939	Adult literacy index: 0.978
Gross enrolment ratio: 83.5%	Gross enrolment ratio: 82.1%
Gross enrolment index: 0.835	Gross enrolment index: 0.821

Second, the education index, which gives two-thirds weight to the adult literacy index and one-third weight to the gross enrolment index, is computed separately for females and males.

$$\text{Education index} = 2/3 (\text{adult literacy index}) + 1/3 (\text{gross enrolment index})$$

$$\text{Female education index} = 2/3 (0.939) + 1/3 (0.835) = 0.905$$

$$\text{Male education index} = 2/3 (0.978) + 1/3 (0.821) = 0.926$$

Finally, the female and male education indices are combined to create the equally distributed education index:

FEMALE	MALE
Population share: 0.507	Population share: 0.493
Education index: 0.905	Education index: 0.926
Equally distributed education index = $\{[0.507 (0.905^{-1})] + [0.493 (0.926^{-1})]\}^{-1} = 0.915$	

3. Calculating the equally distributed income index

First, female and male earned income (PPP US\$) are estimated (for details on this calculation see the addendum to this technical note). Then the income index is calculated for each gender. As for the HDI, income is adjusted by taking the logarithm of estimated earned income (PPP US\$):

$$\text{Income index} = \frac{\log(\text{actual value}) - \log(\text{minimum value})}{\log(\text{maximum value}) - \log(\text{minimum value})}$$

FEMALE	MALE
Estimated earned income (PPP US\$): 12,360	Estimated earned income (PPP US\$): 24,687
Income index = $\frac{\log(12,360) - \log(100)}{\log(40,000) - \log(100)} = 0.804$	Income index = $\frac{\log(24,687) - \log(100)}{\log(40,000) - \log(100)} = 0.919$

Calculating the GDI continues on next page

Calculating the GDI (continued)

Second, the female and male income indices are combined to create the equally distributed income index:

FEMALE	MALE
Population share: 0.507	Population share: 0.493
Income index: 0.804	Income index: 0.919

$$\text{Equally distributed income index} = \{[0.507 (0.804^{-1})] + [0.493 (0.919^{-1})]\}^{-1} = \mathbf{0.857}$$

4. Calculating the GDI

Calculating the GDI is straightforward. It is simply the unweighted average of the three component indices—the equally distributed life expectancy index, the equally distributed education index and the equally distributed income index.

$$\begin{aligned} \text{GDI} &= 1/3 (\text{life expectancy index}) + 1/3 (\text{education index}) + 1/3 (\text{income index}) \\ &= 1/3 (0.891) + 1/3 (0.915) + 1/3 (0.857) = \mathbf{0.888} \end{aligned}$$

Why $\epsilon = 2$ in calculating the GDI

The value of ϵ is the size of the penalty for gender inequality. The larger the value, the more heavily a society is penalized for having inequalities.

If $\epsilon = 0$, gender inequality is not penalized (in this case the GDI would have the same value as the HDI). As ϵ increases towards infinity, more and more weight is given to the lesser achieving group.

The value 2 is used in calculating the GDI (as well as the GEM). This value places a moderate penalty on gender inequality in achievement.

For a detailed analysis of the GDI's mathematical formulation see Sudhir Anand and Amartya Sen's "Gender Inequality in Human Development: Theories and Measurement," Kalpana Bardhan and Stephan Klasen's "UNDP's Gender-Related Indices: A Critical Review" and the technical notes in *Human Development Report 1995* and *Human Development Report 1999* (see the list of selected readings at the end of this technical note).

The gender empowerment measure (GEM)

Focusing on women's opportunities rather than their capabilities, the GEM captures gender inequality in three key areas:

- Political participation and decision-making power, as measured by women's and men's percentage shares of parliamentary seats.
- Economic participation and decision-making power, as measured by two indicators—women's and men's percentage shares of positions as legislators, senior officials and managers and women's and men's percentage shares of professional and technical positions.
- Power over economic resources, as measured by women's and men's estimated earned income (PPP US\$).

For each of these three dimensions, an equally distributed equivalent percentage (EDEP) is calculated, as a population-weighted average, according to the following general formula:

$$\text{EDEP} = \left\{ \left[\text{female population share (female index}^{-1-\epsilon}) \right] + \left[\text{male population share (male index}^{-1-\epsilon}) \right] \right\}^{1/1-\epsilon}$$

ϵ measures the aversion to inequality. In the GEM (as in the GDI) $\epsilon = 2$, which places a moderate penalty on inequality. The formula is thus:

$$\text{EDEP} = \left\{ \left[\text{female population share (female index}^{-1}) \right] + \left[\text{male population share (male index}^{-1}) \right] \right\}^{-1}$$

For political and economic participation and decision-making, the EDEP is then indexed by dividing it by 50. The rationale for this indexation: in an ideal society, with equal empowerment of the sexes, the GEM variables would equal 50%—that is, women's share would equal men's share for each variable.

Finally, the GEM is calculated as a simple average of the three indexed EDEPs.

Calculating the GEM

This illustration of the calculation of the GEM uses data for Singapore.

1. Calculating the EDEP for parliamentary representation

The EDEP for parliamentary representation measures the relative empowerment of women in terms of their political participation. The EDEP is calculated using the female and male shares of the population and female and male percentage shares of parliamentary seats according to the general formula.

FEMALE	MALE
Population share: 0.496	Population share: 0.504
Parliamentary share: 6.5%	Parliamentary share: 93.5%

$$\text{EDEP for parliamentary representation} = \left\{ \left[0.496 (6.5^{-1}) \right] + \left[0.504 (93.5^{-1}) \right] \right\}^{-1} = 12.24$$

Then this initial EDEP is indexed to an ideal value of 50%.

$$\text{Indexed EDEP for parliamentary representation} = \frac{12.24}{50} = \mathbf{0.245}$$

2. Calculating the EDEP for economic participation

Using the general formula, an EDEP is calculated for women's and men's percentage shares of positions as legislators, senior officials and managers, and another for women's and men's percentage shares of professional and technical positions. The simple average of the two measures gives the EDEP for economic participation.

FEMALE	MALE
Population share: 0.496	Population share: 0.504
Percentage share of positions as legislators, senior officials and managers: 21.5%	Percentage share of positions as legislators, senior officials and managers: 78.5%
Percentage share of professional and technical positions: 41.7%	Percentage share of professional and technical positions: 58.3%

$$\text{EDEP for positions as legislators, senior officials and managers} = \left\{ \left[0.496 (21.5^{-1}) \right] + \left[0.504 (78.5^{-1}) \right] \right\}^{-1} = 33.91$$

$$\text{Indexed EDEP for positions as legislators, senior officials and managers} = \frac{33.91}{50} = 0.678$$

$$\text{EDEP for professional and technical positions} = \left\{ \left[0.496 (41.7^{-1}) \right] + \left[0.504 (58.3^{-1}) \right] \right\}^{-1} = 48.69$$

$$\text{Indexed EDEP for professional and technical positions} = \frac{48.69}{50} = 0.974$$

The two indexed EDEPs are averaged to create the EDEP for economic participation:

$$\text{EDEP for economic participation} = \frac{0.678 + 0.974}{2} = \mathbf{0.826}$$

3. Calculating the EDEP for income

Earned income (PPP US\$) is estimated for women and men separately and then indexed to goalposts as for the HDI and the GDI. For the GEM, however, the income index is based on unadjusted values, not the logarithm of estimated earned income. (For details on the estimation of earned income for men and women see the addendum to this technical note.)

FEMALE	MALE
Population share: 0.496	Population share: 0.504
Estimated earned income (PPP US\$): 13,693	Estimated earned income (PPP US\$): 27,739
Income index = $\frac{13,693 - 100}{40,000 - 100} = 0.341$	Income index = $\frac{27,739 - 100}{40,000 - 100} = 0.693$

The female and male indices are then combined to create the equally distributed index:

$$\text{EDEP for income} = \left\{ \left[0.496 (0.341^{-1}) \right] + \left[0.504 (0.693^{-1}) \right] \right\}^{-1} = \mathbf{0.458}$$

4. Calculating the GEM

Once the EDEP has been calculated for the three dimensions of the GEM, determining the GEM is straightforward. It is a simple average of the three EDEP indices.

$$\text{GEM} = \frac{0.245 + 0.826 + 0.458}{3} = \mathbf{0.509}$$

Female and male earned income

Despite the importance of having gender-disaggregated data on income, direct measures are unavailable. For this Report crude estimates of female and male earned income have therefore been derived.

Income can be seen in two ways: as a resource for consumption and as earnings by individuals. The use measure is difficult to disaggregate between men and women because they share resources within a family unit. By contrast, earnings are separable because different members of a family tend to have separate earned incomes.

The income measure used in the GDI and the GEM indicates a person's capacity to earn income. It is used in the GDI to capture the disparities between men and women in command over resources and in the GEM to capture women's economic independence. (For conceptual and methodological issues relating to this approach see Sudhir Anand and Amartya Sen's "Gender Inequality in Human Development" and, in *Human Development Report 1995*, chapter 3 and technical notes 1 and 2; see the list of selected readings at the end of this technical note.)

Female and male earned income (PPP US\$) are estimated using the following data:

- Ratio of the female non-agricultural wage to the male non-agricultural wage.
- Male and female shares of the economically active population.
- Total female and male population.
- GDP per capita (PPP US\$).

Key

W_f/W_m = ratio of female non-agricultural wage to male non-agricultural wage

EA_f = female share of economically active population

EA_m = male share of economically active population

S_f = female share of wage bill

Y = total GDP (PPP US\$)

N_f = total female population

N_m = total male population

Y_f = estimated female earned income (PPP US\$)

Y_m = estimated male earned income (PPP US\$)

Note

Calculations based on data in the technical note may yield results that differ from those in the indicator tables because of rounding.

Estimating female and male earned income

This illustration of the estimation of female and male earned income uses 1999 data for Israel.

1. Calculating total GDP (PPP US\$)

Total GDP (PPP US\$) is calculated by multiplying the total population by GDP per capita (PPP US\$).

Total population: 5,910 (thousand)

GDP per capita (PPP US\$): 18,440

Total GDP (PPP US\$) = 5,910 (18,440) = 108,980,400 (thousand)

2. Calculating the female share of the wage bill

Because data on wages in rural areas and in the informal sector are rare, the Report has used non-agricultural wages and assumed that the ratio of female wages to male wages in the non-agricultural sector applies to the rest of the economy. The female share of the wage bill is calculated using the ratio of the female non-agricultural wage to the male non-agricultural wage and the female and male percentage shares of the economically active population. Where data on the wage ratio are not available, a value of 75%, the unweighted average (rounded value) for countries with available data, is used.

Ratio of female to male non-agricultural wage (W_f/W_m) = 0.75

Female percentage share of economically active population (EA_f) = 40.7%

Male percentage share of economically active population (EA_m) = 59.3%

$$\text{Female share of wage bill } (S_f) = \frac{W_f/W_m (EA_f)}{[W_f/W_m (EA_f)] + EA_m} = \frac{0.75 (40.7)}{[0.75 (40.7)] + 59.3} = \mathbf{0.340}$$

3. Calculating female and male earned income (PPP US\$)

An assumption has to be made that the female share of the wage bill is equal to the female share of GDP.

Female share of wage bill (S_f) = 0.340

Total GDP (PPP US\$) (Y) = 108,980,400 (thousand)

Female population (N_f) = 2,995 (thousand)

$$\text{Estimated female earned income (PPP US$)} (Y_f) = \frac{S_f (Y)}{N_f} = \frac{0.340 (108,980,400)}{2,995} = \mathbf{12,372}$$

Male population (N_m) = 2,915 (thousand)

$$\text{Estimated male earned income (PPP US$)} (Y_m) = \frac{Y - S_f (Y)}{N_m} = \frac{108,980,400 - [0.340 (108,980,400)]}{2,915} = \mathbf{24,675}$$

CALCULATING THE TECHNOLOGY ACHIEVEMENT INDEX

The technology achievement index (TAI) is a composite index designed to capture the performance of countries in creating and diffusing technology and in building a human skills base. The index measures achievements in four dimensions:

- Technology creation, as measured by the number of patents granted to residents per capita and by receipts of royalties and license fees from abroad per capita.
- Diffusion of recent innovations, as measured by the number of Internet hosts per capita and the share of high- and medium-technology exports in total goods exports.
- Diffusion of old innovations, as measured by telephones (mainline and cellular) per capita and electricity consumption per capita.
- Human skills, as measured by mean years of schooling in the population aged 15 and above and the gross tertiary science enrolment ratio.

For each of the indicators in these dimensions the observed minimum and maximum values (among all countries with data) are chosen as “goalposts”. Performance in each indicator is expressed as a value between 0 and 1 by applying the following general formula:

$$\text{Indicator index} = \frac{\text{actual value} - \text{observed minimum value}}{\text{observed maximum value} - \text{observed minimum value}}$$

The index for each dimension is then calculated as the simple average of the indicator indices in that dimension. The TAI, in turn, is the simple average of these four dimension indices.

Goalposts for calculating the TAI

Indicator	Observed maximum value	Observed minimum value
Patents granted to residents (per million people)	994	0
Royalties and license fees received (US\$ per 1,000 people)	272.6	0
Internet hosts (per 1,000 people)	232.4	0
High- and medium-technology exports (as % of total goods exports)	80.8	0
Telephones (mainline and cellular, per 1,000 people)	901 ^a	1
Electricity consumption (kilowatt-hours per capita)	6,969 ^a	22
Mean years of schooling (age 15 and above)	12.0	0.8
Gross tertiary science enrolment ratio (%)	27.4	0.1

a. OECD average.

Note

Calculations based on data in the technical note may yield results that differ from those in annex table A2.1 in chapter 2 because of rounding.

Calculating the TAI

This illustration of the calculation of the TAI uses data for New Zealand for various years in 1997–2000.

1. Calculating the technology creation index

Patents and receipts of royalties and license fees are used to approximate the level of technology creation. Indices for the two indicators are calculated according to the general formula.

$$\text{Patent index} = \frac{103 - 0}{994 - 0} = 0.104$$

$$\text{Royalty and license fee index} = \frac{13.0 - 0.0}{272.6 - 0.0} = 0.048$$

The technology creation index is the simple average of these two indices:

$$\text{Technology creation index} = \frac{0.104 + 0.048}{2} = \mathbf{0.076}$$

2. Calculating the diffusion of recent innovations index

Using Internet hosts and the share of high- and medium-technology exports in total goods exports, the same formula is applied to calculate the diffusion of recent innovations index.

$$\text{Internet host index} = \frac{146.7 - 0.0}{232.4 - 0.0} = 0.631$$

$$\text{High- and medium-technology export index} = \frac{15.4 - 0.0}{80.8 - 0.0} = 0.191$$

$$\text{Diffusion of recent innovations index} = \frac{0.631 + 0.191}{2} = \mathbf{0.411}$$

3. Calculating the diffusion of old innovations index

The two indicators used to represent the diffusion of old innovations are telephones (mainline and cellular) and electricity consumption per capita. For these, the indices are calculated using the logarithm of the value, and the upper goalpost is the OECD average. For a detailed discussion see annex 2.1.

$$\text{Telephony index} = \frac{\log(720) - \log(1)}{\log(901) - \log(1)} = 0.967$$

For electricity consumption New Zealand’s value is capped at 6,969, since it exceeds the goalpost.

$$\text{Electricity index} = \frac{\log(6,969) - \log(22)}{\log(6,969) - \log(22)} = 1.000$$

$$\text{Diffusion of old innovations index} = \frac{0.967 + 1.000}{2} = \mathbf{0.984}$$

4. Calculating the human skills index

The human skills index is calculated according to the general formula, using mean years of schooling and the gross tertiary science enrolment ratio.

$$\text{Mean years of schooling index} = \frac{11.7 - 0.8}{12.0 - 0.8} = 0.973$$

$$\text{Gross tertiary science enrolment index} = \frac{13.1 - 0.1}{27.4 - 0.1} = 0.476$$

$$\text{Human skills index} = \frac{0.973 + 0.476}{2} = \mathbf{0.725}$$

5. Calculating the technology achievement index

A simple average of the four dimension indices gives us the technology achievement index.

$$\text{TAI} = \frac{0.076 + 0.411 + 0.984 + 0.725}{4} = \mathbf{0.549}$$

ASSESSING PROGRESS TOWARDS THE MILLENNIUM DECLARATION GOALS FOR DEVELOPMENT AND POVERTY ERADICATION

This year's *Human Development Report* assesses the progress by countries towards specific targets outlined in the Millennium Declaration goals for development and poverty eradication. Each target has been set for 2015, with 1990 as the reference year. So achieving a target of, say, halving a rate or ratio by 2015 would mean reducing its 1990 value by 50% by 2015. Assessing the achievements of countries between 1990 and 1999 reveals whether they are progressing fast enough to meet the targets.

Monitoring progress at the global level requires data that are comparable. Yet data are missing or unreliable for some targets and for many countries. Countries at higher levels of development are more likely to have data, so those included in the assessment are likely to be among the better performers. High-income OECD countries have been excluded from the assessment. The number of countries whose progress has been assessed for each target ranges from 58 to 159 (technical note table 3.1).

The assessment of countries' achievements in 1999 is based on the following criteria:

- *Achieved*: The country has already achieved the target.
- *On track*: The country has attained the rate of progress needed to achieve the target by 2015 or has attained 90% of that rate of progress.
- *Lagging*: The country has achieved 70–89% of the rate of progress required to achieve the target by 2015.
- *Far behind*: The country has achieved less than 70% of the required rate of progress.
- *Slipping back*: The country's level of achievement is at least 5 percentage points worse in 1999 than in 1990.

The rate of progress required to meet the target is determined by the achievement that would be required by 1999, assuming a linear path of progress. Where data are not available for 1990 or 1999, data for the closest available year have been used. All countries within 10 percentage points of the universal goal (such as 100% school enrolment) in 1999 are considered to be on track.

The preferred indicator for assessing progress towards halving the proportion of people in extreme poverty is the share of the population living on less than \$1 (PPP US\$) a day, but country time series based on this poverty line are not widely available. A proxy approach has therefore been used, employing growth rate estimates from a study by Hanmer and

Naschold (2000). This study developed growth rates for two scenarios: business as usual (assuming no change in growth patterns) and pro-poor conditions (in which the benefits of growth reach poor people faster).

In each scenario the growth rate required for a country to meet the target of halving poverty by 2015 depends on whether that country has low or high inequality, as measured by the Gini index. Countries with high inequality (defined as a Gini index of 43 or higher) require faster growth to reach the target (technical note table 3.2). Given these growth rates, each country's progress has been assessed by the extent to which it has attained the required rate of growth.

For several other indicators—the maternal mortality ratio, the percentage of people with access to improved water sources and the percentage of children reaching grade 5—reliable data are difficult to obtain and time series are unavailable, so rates of progress are unknown. Proxy assessments have been made based on performance in the most recent year for which reasonably reliable data are available (technical note table 3.3).

Technical note table 3.1
Indicators used in assessment of progress towards Millennium Declaration goals

	Indicator	Countries assessed ^a	Source
Extreme poverty	Average annual GDP per capita growth rate, 1990–99, and Gini index, 1990–99 ^b	85 (77)	World Bank 2001a and 2001b
Hunger	Percentage of people undernourished, 1990/92 and 1996/98	86 (73)	FAO 2000
Safe water	Percentage of people with access to improved water sources, 1999	133 (82)	UNICEF 2000
Universal education	Net primary enrolment ratio, 1990 and 1995–97 ^b	58 (39)	UNESCO 2001c
	Percentage of children reaching grade 5, 1995 cohort	83 (39)	UNESCO 2000d
Gender equality	Ratio of girls to boys in school (girls' gross enrolment ratio to boys'), 1990 and 1995–97 ^b		
	Primary level	88 (63)	UNESCO 1999
	Secondary level	85 (64)	UNESCO 1999
Maternal mortality	Maternal mortality ratio (per 100,000 live births), 1995	145 (85)	Hill, AbouZahr and Wardlaw 2001
Infant and child mortality	Infant mortality rate (per 1,000 live births), 1990 and 1999 ^c	159 (85)	UNICEF 2001
	Under-five mortality rate (per 1,000 live births), 1990 and 1999	159 (85)	UNICEF 2001

a. Figures in parentheses refer to the percentage of the world population covered by the assessment.

b. Data refer to the most recent year available during the period specified.

c. International development goal.

Technical note table 3.2
Annual GDP per capita growth rate needed to halve poverty by 2015

	Percent	
	Business as usual	Pro-poor conditions
High-inequality countries (Gini index ≥ 43)	7.1	3.7
Low-inequality countries (Gini index < 43)	3.7	1.5

Source: Hanmer and Naschold 2000.

Technical note table 3.3
Criteria for assessing progress in maternal mortality, access to improved water sources and completion of primary schooling

Assessment	Maternal mortality ratio (per 100,000 live births)	People with access to improved water sources (%)	Children reaching grade 5 (%)
	1995	1999	1995 cohort
Achieved	< 20	100	100
On track	21–99	90–99	90–99
Lagging	100–599	70–89	70–89
Far behind	600 or more	<70	<70

Definitions of statistical terms

Armed forces, total Strategic, land, naval, air, command, administrative and support forces. Also included are paramilitary forces such as the gendarmerie, customs service and border guard, if these are trained in military tactics.

Arms transfers, conventional Refers to the voluntary transfer by the supplier (and thus excludes captured weapons and weapons obtained through defectors) of weapons with a military purpose destined for the armed forces, paramilitary forces or intelligence agencies of another country. These include major conventional weapons or systems in six categories: ships, aircraft, missiles, artillery, armoured vehicles and guidance and radar systems (excluded are trucks, services, ammunition, small arms, support items, components and component technology and towed or naval artillery under 100-millimetre calibre).

Births attended by skilled health staff The percentage of deliveries attended by a doctor (a specialist, a non-specialist or a person with midwifery skills who can diagnose and manage obstetrical complications as well as normal deliveries), nurse or midwife (a person who has successfully completed the prescribed course of midwifery and is able to give the necessary supervision, care and advice to women during pregnancy, labour and the postpartum period and to care for newborns and infants) or trained traditional birth attendant (a person who initially acquired his or her ability by delivering babies or through apprenticeship to other traditional birth attendants and who has undergone subsequent extensive training and is now integrated in the formal health care system).

Birth-weight, infants with low The percentage of infants with a birth-weight of less than 2,500 grams.

Carbon dioxide emissions Anthropogenic (human-originated) carbon dioxide emissions stemming from the burning of fossil fuels and the production of cement. Emissions are calculated from data on the consumption of solid, liquid and gaseous fuels and gas flaring.

Cellular mobile subscribers People subscribing to a communications service in which voice or data are transmitted by radio frequencies.

Children reaching grade 5 The percentage of children starting primary school who eventually attain grade 5 (grade 4 if the duration of primary school is four years). The estimate is based on the reconstructed cohort method, which uses data on enrolment and repeaters for two consecutive years.

Cigarette consumption per adult, annual average The sum of production and imports minus exports of cigarettes divided by the population aged 15 and above.

Consumer price index Reflects changes in the cost to the average consumer of acquiring a basket of goods and services that may be fixed or change at specified intervals.

Contraceptive prevalence The percentage of married women aged 15–49 who are using, or whose partners are using, any form of contraception, whether modern or traditional.

Contributing family worker Defined according to the International Classification by Status in Employment (ICSE) as a person who works without pay in an economic enterprise operated by a related person living in the same household.

Crime, people victimized by The percentage of the population who perceive that they have been victimized by certain types of crime in the preceding year, based on responses to the International Crime Victims Survey. For further information see box 3 in the note on statistics.

Crime, total Refers to 11 crimes recorded in the International Crime Victims Survey: robbery, burglary, attempted burglary, car theft, car vandalism, bicycle theft, sexual assault, theft from car, theft of personal property, assault and threats and theft of motorcycle or moped. See *crime, people victimized by*.

Debt service, total The sum of principal repayments and interest actually paid in foreign currency, goods or services on long-term debt, interest paid on short-term debt and repayments to the International Monetary Fund.

Earned income (PPP US\$), estimated (female and male) Roughly derived on the basis of the ratio of the female non-agricultural wage to the male non-agricultural wage, the female and male shares of the economically active population, total female and male population and GDP per capita (PPP US\$). For details on this estimation see technical note 1.

Earned income, ratio of estimated female to male The ratio of estimated female earned income to estimated male earned income. See *earned income (PPP US\$), estimated (female and male)*.

Economic activity rate The proportion of the specified group supplying labour for the production of economic goods and services during a specified period.

Education expenditure, public Public spending on public education plus subsidies to private education at the primary, secondary and tertiary levels. It includes expenditure at every level of administration—central, regional and local. See *education levels*.

Education index One of the three indices on which the human development index is built. It is based on the adult literacy rate and the combined primary, secondary and tertiary gross enrolment ratio. For details on how the index is calculated see technical note 1.

Education levels Categorized as pre-primary, primary, secondary or tertiary in accordance with the International Standard Classification of Education (ISCED). *Pre-primary education* (ISCED level 0) is provided at such schools as kindergartens and nursery and infant schools and is intended for children not old enough to enter school at the primary level. *Primary education* (ISCED level 1) provides the basic elements of education at such establishments as primary and elementary schools. *Secondary education* (ISCED levels 2 and 3) is based on at least four years of previous instruction at the first level and provides general or specialized instruction, or both, at such institutions as middle school, secondary school, high school, teacher training school at this level and vocational or technical school. *Tertiary education* (ISCED levels 5–7) refers to education at such institutions as universities, teachers colleges and higher-level professional schools—requiring as a minimum condition of admission the successful completion of education at the second level or evidence of the attainment of an equivalent level of knowledge.

Electricity consumption per capita Refers to gross production, in per capita terms, which includes consumption by station auxiliaries and any losses in the transformers that are considered integral parts of the station. Included also is total electric energy produced by pumping installations without deduction of electric energy absorbed by pumping.

Employment by economic activity Employment in industry, agriculture or services as defined according to the International Standard Industrial Classification (ISIC) system (revisions 2 and 3). *Industry* refers to mining and quarrying, manufacturing, construction and public utilities (gas, water and electricity). *Agriculture* refers to agriculture, hunting, forestry and fishing. *Services* refer to wholesale and retail trade; restaurants and hotels; transport, storage and communications; finance, insurance, real estate and business services; and community, social and personal services.

Energy use, GDP per unit of The ratio of GDP (PPP US\$) to commercial energy use, measured in kilograms of oil equivalent. This ratio provides a measure of energy efficiency by showing comparable and consistent estimates of real GDP across countries relative to physical inputs (units of energy use). See *GDP (gross domestic product)* and *PPP (purchasing power parity)*.

Enrolment ratio, gross The number of students enrolled in a level of education, regardless of age, as a percentage of the population of official school age for that level. See *education levels*.

Enrolment ratio, gross tertiary science The number of students enrolled in tertiary education in science, regardless of age, as a percentage of the population of the relevant age range. *Science* refers to natural sciences; engineering; mathematics and computer sciences; architecture and town planning; transport and communications; trade, craft and industrial programmes; and agriculture, forestry and fisheries. See also *education levels* and *enrolment ratio, gross*.

Enrolment ratio, net The number of students enrolled in a level of education who are of official school age for that level, as a percentage of the population of official school age for that level. See *education levels*.

Essential drugs, population with access to The percentage of the population for whom a minimum of 20 of the most essential drugs are continuously and affordably available at public or private health facilities or drug outlets within one hour's travel from home.

Exports, high and medium technology See *exports, high technology*; and *exports, medium technology*.

Exports, high technology Includes exports of electronics and electrical products such as turbines, transistors, televisions, power generating equipment and data processing and telecommunications equipment, as well as other high-technology exports such as cameras, pharmaceuticals, aerospace equipment and optical and measuring instruments.

Exports, low technology Includes exports of textiles, paper, glassware and basic steel and iron products (such as sheets, wires and unworked casting).

Exports, manufactured Includes exports of chemicals, basic manufactures, machinery and transport equipment and other miscellaneous manufactured goods, based on the Standard International Trade Classification.

Exports, medium technology Includes exports of automotive products, manufacturing equipment (such as agricultural, textile and food processing machinery), some forms of steel (tubes and primary forms) and chemical products such as polymers, fertilizers and explosives.

Exports, merchandise Goods provided to the rest of the world, including primary exports, manufactured exports and other transactions. See *exports, manufactured*; and *exports, primary*.

Exports, primary Defined according to the Standard International Trade Classification to include exports of food, agricultural raw materials, fuels and ores and metals.

Exports of goods and services The value of all goods and other market services provided to the rest of the world, including the value of merchandise, freight, insurance, transport, travel, royalties, license fees and other services. Labour and property income (formerly called factor services) is excluded.

Fertility rate, total The average number of children a woman would bear if age-specific fertility rates remained unchanged during her lifetime.

Fertilizer consumption The amount of manufactured fertilizer—nitrogen (N), phosphate (P_2O_5) and potassium (K_2O)—consumed per year per hectare of arable and permanently cropped land.

Foreign direct investment, net flows Net inflows of investment to acquire a lasting management interest

(10% or more of voting stock) in an enterprise operating in an economy other than that of the investor. It is the sum of equity capital, reinvestment of earnings, other long-term capital and short-term capital.

Fuel consumption, traditional Estimated consumption of fuel wood, charcoal, bagasse and animal and vegetable wastes. Traditional fuel use and commercial energy use together make up total energy use.

Functional literacy skills, people lacking The proportion of the adult population aged 16–65 scoring at level 1 on the prose literacy scale of the International Adult Literacy Survey (IALS). Most tasks at this level require the reader to locate a piece of information in the text that is identical to or synonymous with the information given in the directive.

GDP (gross domestic product) The total output of goods and services for final use produced by an economy, by both residents and non-residents, regardless of the allocation to domestic and foreign claims. It does not include deductions for depreciation of physical capital or depletion and degradation of natural resources.

GDP index One of the three indices on which the human development index is built. It is based on GDP per capita (PPP US\$). For details on how the index is calculated see technical note 1.

GDP per capita (PPP US\$) See *GDP (gross domestic product)* and *PPP (purchasing power parity)*.

GDP per capita annual growth rate Least squares annual growth rate, calculated from constant price GDP per capita in local currency units.

Gender empowerment measure (GEM) A composite index measuring gender inequality in three basic dimensions of empowerment—economic participation and decision-making, political participation and decision-making and power over economic resources. For details on how the index is calculated see technical note 1.

Gender-related development index (GDI) A composite index measuring average achievement in the three basic dimensions captured in the human development index—a long and healthy life, knowledge and a decent standard of living—adjusted to account for inequalities between men and women. For details on how the index is calculated see technical note 1.

Gini index Measures the extent to which the distribution of income (or consumption) among individ-

uals or households within a country deviates from a perfectly equal distribution. A value of 0 represents perfect equality, a value of 100 perfect inequality.

GNP (gross national product) Comprises GDP plus net factor income from abroad, which is the income residents receive from abroad for factor services (labour and capital), less similar payments made to non-residents who contribute to the domestic economy.

Grants by NGOs, net Resource transfers by national non-governmental organizations (private non-profit-making agencies) to developing countries or territories identified in part I of the Development Assistance Committee (DAC) list of recipient countries. Calculated as gross outflows from NGOs minus resource transfers received from the official sector (which are already counted in official development assistance). See *official development assistance (ODA), net*.

Health expenditure per capita (PPP US\$) The sum of public and private expenditure (in PPP US\$), divided by the population. Health expenditure includes the provision of health services (preventive and curative), family planning activities, nutrition activities and emergency aid designated for health (but does not include provision of water and sanitation). See *health expenditure, private*; *health expenditure, public*; and *PPP (purchasing power parity)*.

Health expenditure, private Direct household (out-of-pocket) spending, private insurance, charitable donations and direct service payments by private corporations. Together with public health expenditure, it makes up total health expenditure. See *health expenditure per capita (PPP US\$)* and *health expenditure, public*.

Health expenditure, public Recurrent and capital spending from government (central and local) budgets, external borrowings and grants (including donations from international agencies and non-governmental organizations) and social (or compulsory) health insurance funds. Together with private health expenditure, it makes up total health expenditure. See *health expenditure per capita (PPP US\$)* and *health expenditure, private*.

HIV/AIDS, people living with The estimated number of people living with HIV/AIDS at the end of the year specified.

Human development index (HDI) A composite index measuring average achievement in three basic dimensions of human development—a long and healthy life, knowledge and a decent standard of living. For details on how the index is calculated see technical note 1.

Human poverty index (HPI-1) for developing countries A composite index measuring deprivations in the three basic dimensions captured in the human development index—longevity, knowledge and standard of living. For details on how the index is calculated see technical note 1.

Human poverty index (HPI-2) for selected OECD countries A composite index measuring deprivations in the three basic dimensions captured in the human development index—longevity, knowledge and standard of living—and also capturing social exclusion. For details on how the index is calculated see technical note 1.

Illiteracy rate, adult Calculated as 100 minus the adult literacy rate. See *literacy rate, adult*.

Imports of goods and services The value of all goods and other market services purchased from the rest of the world, including the value of merchandise, freight, insurance, transport, travel, royalties, license fees and other services. Labour and property income (formerly called factor services) is excluded.

Income or consumption, shares of Based on national household surveys covering various years. Consumption surveys produce lower levels of inequality between poor and rich than do income surveys, as poor people generally consume a greater share of their income. Because data come from surveys covering different years and using different methodologies, comparisons between countries must be made with caution.

Income poverty line, population below Refers to the percentage of the population living below the specified poverty line:

- \$1 a day—at 1985 international prices (equivalent to \$1.08 at 1993 international prices), adjusted for purchasing power parity.
- \$4 a day—at 1990 international prices, adjusted for purchasing power parity.
- \$11 a day (per person for a family of three)—at 1994 international prices, adjusted for purchasing power parity.
- National poverty line—the poverty line deemed appropriate for a country by its authorities.
- 50% of median income—50% of the median disposable household income.

Infant mortality rate The probability of dying between birth and exactly one year of age expressed per 1,000 live births.

Internally displaced people Refers to people who are displaced within their own country and to whom the United Nations High Commissioner for Refugees

(UNHCR) extends protection or assistance, or both, in pursuance to a special request by a competent organ of the United Nations.

Internet host A computer system connected to the Internet—either a single terminal directly connected or a computer that allows multiple users to access network services through it.

Labour force All those employed (including people above a specified age who, during the reference period, were in paid employment, at work, with a job but not at work, or self-employed) and unemployed (including people above a specified age who, during the reference period, were without work, currently available for work and seeking work).

Legislators, senior officials and managers, female Women's share of positions defined according to the International Standard Classification of Occupations (ISCO-88) to include legislators, senior government officials, traditional chiefs and heads of villages, senior officials of special interest organizations, corporate managers, directors and chief executives, production and operations department managers and other department and general managers.

Life expectancy at birth The number of years a newborn infant would live if prevailing patterns of age-specific mortality rates at the time of birth were to stay the same throughout the child's life.

Life expectancy index One of the three indices on which the human development index is built. For details on how the index is calculated see technical note 1.

Literacy rate, adult The percentage of people aged 15 and above who can, with understanding, both read and write a short, simple statement on their everyday life.

Literacy rate, youth The percentage of people aged 15–24 who can, with understanding, both read and write a short, simple statement on their everyday life.

Malaria cases The total number of malaria cases reported to the World Health Organization by countries in which malaria is endemic. Many countries report only laboratory-confirmed cases, but many in Sub-Saharan Africa report clinically diagnosed cases as well.

Maternal mortality ratio reported Reported annual number of deaths of women from pregnancy-related causes per 100,000 live births, not adjusted for the well-documented problems of underreporting and misclassification.

Military expenditure All expenditures of the defence ministry and other ministries on recruiting and training military personnel as well as on construction and purchase of military supplies and equipment. Military assistance is included in the expenditures of the donor country.

Official aid Grants or loans that meet the same standards as for official development assistance (ODA) except that recipients do not qualify as recipients of ODA. Part II of the Development Assistance Committee (DAC) list of recipient countries identifies these countries.

Official development assistance (ODA), net Grants or loans to qualifying countries or territories, net of repayments, identified in part I of the Development Assistance Committee (DAC) list of recipient countries, that are undertaken by the official sector with promotion of economic development and welfare as the main objective, on concessional financial terms.

Official development assistance (ODA) to least developed countries See *official development assistance (ODA), net* and country classifications for least developed countries.

Oral rehydration therapy use rate The percentage of all cases of diarrhoea in children under age five treated with oral rehydration salts or recommended home fluids, or both.

Patents granted to residents Patents are documents, issued by a government office, that describe an invention and create a legal situation in which the patented invention can normally be exploited (made, used, sold, imported) only by or with the authorization of the patentee. The protection of inventions is generally limited to 20 years from the filing date of the application for the grant of a patent.

Physicians Includes graduates of a faculty or school of medicine in any medical field (including teaching, research and administration).

Population growth rate, annual Refers to the annual exponential growth rate for the period indicated. See *population, total*.

Population, total Refers to the de facto population, which includes all people actually present in a given area at a given time.

PPP (purchasing power parity) A rate of exchange that accounts for price differences across countries,

allowing international comparisons of real output and incomes. At the PPP US\$ rate (as used in this Report), PPP US\$1 has the same purchasing power in the domestic economy as \$1 has in the United States. For details on conceptual and practical issues relating to PPPs see box 2 in the note on statistics.

Private flows, other A category combining non-debt-creating portfolio equity investment flows (the sum of country funds, depository receipts and direct purchases of shares by foreign investors), portfolio debt flows (bond issues purchased by foreign investors) and bank and trade-related lending (commercial bank lending and other commercial credits).

Probability at birth of not surviving to a specified age Calculated as 1 minus the probability of surviving to a specified age for a given cohort. See *probability at birth of surviving to a specified age*.

Probability at birth of surviving to a specified age The probability of a newborn infant surviving to a specified age, if subject to prevailing patterns of age-specific mortality rates.

Professional and technical workers, female Women's share of positions defined according to the International Standard Classification of Occupations (ISCO-88) to include physical, mathematical and engineering science professionals (and associate professionals), life science and health professionals (and associate professionals), teaching professionals (and associate professionals) and other professionals and associate professionals.

Refugees People who have fled their country because of a well-founded fear of persecution for reasons of their race, religion, nationality, political opinion or membership in a particular social group and who cannot or do not want to return.

Research and development expenditures Current and capital expenditures (including overhead) on creative, systematic activity intended to increase the stock of knowledge. Included are fundamental and applied research and experimental development work leading to new devices, products or processes.

Royalties and license fees, receipts of Receipts by residents from non-residents for the authorized use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, trademarks, copyrights, franchises and industrial processes) and for the use, through licensing agreements, of produced originals of prototypes (such as films and manuscripts). Data are based on the balance of payments.

Sanitation facilities, population using adequate

The percentage of the population using adequate sanitation facilities, such as a connection to a sewer or septic tank system, a pour-flush latrine, a simple pit latrine or a ventilated improved pit latrine. An excreta disposal system is considered adequate if it is private or shared (but not public) and if it hygienically separates human excreta from human contact.

Schooling, mean years of The average number of years of school attained by the population aged 15 and above.

Science, math and engineering, tertiary students in

The share of tertiary students enrolled in natural sciences; engineering; mathematics and computer sciences; architecture and town planning; transport and communications; trade, craft and industrial programmes; and agriculture, forestry and fisheries. See *education levels*.

Scientists and engineers in R&D People trained to work in any field of science who are engaged in professional research and development (R&D) activity. Most such jobs require the completion of tertiary education.

Seats in parliament held by women Refers to seats held by women in a lower or single house or an upper house or senate, where relevant.

Technology achievement index A composite index based on eight indicators in four dimensions: technology creation, diffusion of recent innovations, diffusion of old innovations and human skills. For more details on how the index is calculated see technical note 2.

Telephone mainline A telephone line connecting a subscriber to the telephone exchange equipment.

Terms of trade The ratio of the export price index to the import price index measured relative to a base year. A value of more than 100 implies that the price of exports has risen relative to the price of imports.

Tractors in use The number of tractors in use per hectare of arable and permanently cropped land.

Tuberculosis cases The total number of tuberculosis cases notified to the World Health Organization. A tuberculosis case is defined as a patient in whom tuberculosis has been bacteriologically confirmed or diagnosed by a clinician.

Under-five mortality rate The probability of dying between birth and exactly five years of age expressed per 1,000 live births.

Under height for age, children under age five

Includes moderate and severe stunting, which is defined as below two standard deviations from the median height for age of the reference population.

Undernourished people People whose food intake is insufficient to meet their minimum energy requirements on a chronic basis.

Underweight for age, children under age five

Includes moderate and severe underweight, which is defined as below two standard deviations from the median weight for age of the reference population.

Unemployment All people above a specified age who are not in paid employment or self-employed, but are available for work and have taken specific steps to seek paid employment or self-employment.

Unemployment, long-term Unemployment lasting 12 months or longer. See *unemployment*.

Unemployment, youth Refers to unemployment between the ages of 15 (or 16) and 24, depending on national definitions. See *unemployment*.

Urban population The midyear population of areas defined as urban in each country, as reported to the United Nations. See *population, total*.

Waiting list for mainlines Unmet applications for connection to the telephone network that have had to be held over owing to a lack of technical facilities (equipment, lines and the like).

Water sources, population not using improved

Calculated as 100 minus the percentage of the population using improved water sources. See *water sources, population using improved*.

Water sources, population using improved

The percentage of the population with reasonable access to an adequate amount of drinking water from improved sources. Reasonable access is defined as the availability of at least 20 litres per person per day from a source within one kilometre of the user's dwelling. Improved sources include household connections, public standpipes, boreholes with handpumps, protected dug wells, protected springs and rainwater collection (not included are vendors, tanker trucks and unprotected wells and springs).

Women in government at ministerial level

Defined according to each state's definition of a national executive and may include women serving as ministers and vice-ministers and those holding other ministerial positions, including parliamentary secretaries.

Classification of countries

Countries in the human development aggregates

<i>High human development</i> (HDI 0.800 and above)	<i>Medium human development</i> (HDI 0.500–0.799)		<i>Low human development</i> (HDI below 0.500)
Argentina	Albania	Libyan Arab Jamahiriya	Angola
Australia	Algeria	Macedonia, TFYR	Bangladesh
Austria	Armenia	Malaysia	Benin
Bahamas	Azerbaijan	Maldives	Bhutan
Bahrain	Belarus	Mauritius	Burkina Faso
Barbados	Belize	Mexico	Burundi
Belgium	Bolivia	Moldova, Rep. of	Central African Republic
Brunei Darussalam	Botswana	Mongolia	Chad
Canada	Brazil	Morocco	Congo, Dem. Rep. of the
Chile	Bulgaria	Myanmar	Côte d'Ivoire
Costa Rica	Cambodia	Namibia	Djibouti
Croatia	Cameroon	Nicaragua	Eritrea
Cyprus	Cape Verde	Oman	Ethiopia
Czech Republic	China	Panama	Gambia
Denmark	Colombia	Papua New Guinea	Guinea
Estonia	Comoros	Paraguay	Guinea-Bissau
Finland	Congo	Peru	Haiti
France	Dominican Republic	Philippines	Lao People's Dem. Rep.
Germany	Ecuador	Romania	Madagascar
Greece	Egypt	Russian Federation	Malawi
Hong Kong, China (SAR)	El Salvador	Samoa (Western)	Mali
Hungary	Equatorial Guinea	Saudi Arabia	Mauritania
Iceland	Fiji	South Africa	Mozambique
Ireland	Gabon	Sri Lanka	Nepal
Israel	Georgia	Suriname	Niger
Italy	Ghana	Swaziland	Nigeria
Japan	Guatemala	Syrian Arab Republic	Pakistan
Korea, Rep. of	Guyana	Tajikistan	Rwanda
Kuwait	Honduras	Thailand	Senegal
Lithuania	India	Trinidad and Tobago	Sierra Leone
Luxembourg	Indonesia	Tunisia	Sudan
Malta	Iran, Islamic Rep. of	Turkey	Tanzania, U. Rep. of
Netherlands	Jamaica	Turkmenistan	Togo
New Zealand	Jordan	Ukraine	Uganda
Norway	Kazakhstan	Uzbekistan	Yemen
Poland	Kenya	Venezuela	Zambia
Portugal	Kyrgyzstan	Viet Nam	<i>(36 countries and areas)</i>
Qatar	Latvia	Zimbabwe	
Singapore	Lebanon	<i>(78 countries and areas)</i>	
Slovakia	Lesotho		
Slovenia			
Spain			
Sweden			
Switzerland			
United Arab Emirates			
United Kingdom			
United States			
Uruguay			
<i>(48 countries and areas)</i>			

Countries in the income aggregates ^a

<i>High income</i> (GNP per capita of \$9,266 or more in 1999)	<i>Middle income</i> (GNP per capita of \$756–9,265 in 1999)		<i>Low income</i> (GNP per capita of \$755 or less in 1999)	
Australia	Albania	Latvia	Angola	Madagascar
Austria	Algeria	Lebanon	Armenia	Malawi
Bahamas	Argentina	Libyan Arab Jamahiriya	Azerbaijan	Mali
Belgium	Bahrain	Lithuania	Bangladesh	Mauritania
Brunei Darussalam	Barbados	Macedonia, TFYR	Benin	Moldova, Rep. of
Canada	Belarus	Malaysia	Bhutan	Mongolia
Cyprus	Belize	Maldives	Burkina Faso	Mozambique
Denmark	Bolivia	Malta	Burundi	Myanmar
Finland	Botswana	Mauritius	Cambodia	Nepal
France	Brazil	Mexico	Cameroon	Nicaragua
Germany	Bulgaria	Morocco	Central African Republic	Niger
Greece	Cape Verde	Namibia	Chad	Nigeria
Hong Kong, China (SAR)	Chile	Oman	Comoros	Pakistan
Iceland	China	Panama	Congo	Rwanda
Ireland	Colombia	Papua New Guinea	Congo, Dem. Rep. of the	Senegal
Israel	Costa Rica	Paraguay	Côte d'Ivoire	Sierra Leone
Italy	Croatia	Peru	Eritrea	Sudan
Japan	Czech Republic	Philippines	Ethiopia	Tajikistan
Kuwait	Djibouti	Poland	Gambia	Tanzania, U. Rep. of
Luxembourg	Dominican Republic	Romania	Georgia	Togo
Netherlands	Ecuador	Russian Federation	Ghana	Turkmenistan
New Zealand	Egypt	Samoa (Western)	Guinea	Uganda
Norway	El Salvador	Saudi Arabia	Guinea-Bissau	Ukraine
Portugal	Equatorial Guinea	Slovakia	Haiti	Uzbekistan
Qatar	Estonia	South Africa	India	Viet Nam
Singapore	Fiji	Sri Lanka	Indonesia	Yemen
Slovenia	Gabon	Suriname	Kenya	Zambia
Spain	Guatemala	Swaziland	Kyrgyzstan	Zimbabwe
Sweden	Guyana	Syrian Arab Republic	Lao People's Dem. Rep.	(58 countries and areas)
Switzerland	Honduras	Thailand	Lesotho	
United Arab Emirates	Hungary	Trinidad and Tobago		
United Kingdom	Iran, Islamic Rep. of	Tunisia		
United States	Jamaica	Turkey		
(33 countries and areas)	Jordan	Uruguay		
	Kazakhstan	Venezuela		
	Korea, Rep. of	(71 countries and areas)		

a. Based on World Bank classifications (effective as of 1 July 2000).

Countries in the major world aggregates

Developing countries

Algeria	Iran, Islamic Rep. of	Tunisia	Uganda	Iceland
Angola	Jamaica	Turkey	Yemen	Ireland
Argentina	Jordan	Uganda	Zambia	Italy

Honduras	Tanzania, U. Rep. of	Sierra Leone	France	
Hong Kong, China (SAR)	Thailand	Sudan	Germany	
India	Togo	Tanzania, U. Rep. of	Greece	
Indonesia	Trinidad and Tobago	Togo	Hungary	

a. The classification *least developed countries* is based on the UN definition that went into effect in 1994 (with the countries as listed in UN 1996). Senegal was added to the list of least developed countries on 12 April 2001 but is not included in the aggregates for this group in this year's Report because the addition was made after the aggregates were finalized.

b. Excludes the Czech Republic, Hungary, the Republic of Korea, Mexico, Poland, Slovakia and Turkey.

Developing countries in the regional aggregates

<i>Arab States</i>	<i>Asia and the Pacific</i>	<i>Latin America and the Caribbean</i>	<i>Southern Europe</i>	<i>Sub-Saharan Africa</i>

Fuel consumption, traditional	18
Functional literacy skills, people lacking	4

G	
GDP index	1
GDP per capita (PPP US\$)	1, 11, 28
annual growth rate	11
highest value during 1975-99	11
year of highest value	11
GDP, total	

INDEX TO INDICATORS

Indicator	Indicator tables
in PPP US\$ billions	11
in US\$ billions	11
Gender empowerment measure (GEM)	22
Gender-related development index (GDI)	21

H

Health expenditure	
per capita (PPP US\$)	6
private	6
public	6, 16
HIV/AIDS	
adult rate of	7, 28
children living with	7
women living with	7
Human development index (HDI)	1
trends in	2
Human poverty index (HPI-1) for developing countries	3
Human poverty index (HPI-2) for selected OECD countries	4
Human rights instruments, status of major international	26

I

Illiteracy rate, adult	3
Immunization of one-year-olds	
against measles	6
against tuberculosis	6
Imports of goods and services	13
Income inequality measures	
Gini index	12
income ratio, richest 10% to poorest 10%	12
income ratio, richest 20% to poorest 20%	12
Income or consumption, share of	
poorest 10%	12
poorest 20%	12
richest 10%	12
richest 20%	12
Infant mortality rate	8, 28
Investment flows, net foreign direct	15

L

Labour rights conventions, status of fundamental	27
Life expectancy at birth	1, 8, 28
female	21
male	21
Life expectancy index	1
Literacy rate, adult	1, 10, 28
female	21, 23
female as % of male	23
index	10
male	21
Literacy rate, youth	10

Indicator	Indicator tables
female	23
female as % of male	23
index	10

M

Malaria cases	7
Maternal mortality ratio reported	8
Military expenditure	16

O

Official development assistance (ODA) disbursed, net as % of GNP	14
net grants by NGOs as % of GNP	14
per capita of donor country	14
to least developed countries	14
total (US\$ millions)	14
Official development assistance (ODA) received (net disbursements)	
as % of GDP	15
per capita	15
total	15
Oral rehydration therapy use rate	6

P

Physicians	6
Population	
annual growth rate	5
aged 65 and above	5
total	5, 28
under age 15	5
urban	5
Poverty, income	
population living below \$1 a day	3
population living below \$4 a day	4
population living below \$11 a day	4
population living below 50% of median income	4
population living below national poverty line	3
Private flows, other	15

R

Refugees	
by country of asylum	19
by country of origin	19

S

Sanitation, adequate facilities, population using	6
Science, math and engineering, tertiary students in	10

INDEX TO INDICATORS

Indicator	Indicator tables
Survival	
probability at birth of not surviving to age 40	3
probability at birth of not surviving to age 60	4
probability at birth of surviving to age 65	
female	8
male	8

T

Terms of trade	13
Tuberculosis cases	7

U

Under-five mortality rate	8, 28
Under height for age, children under age five	7
Undernourished people	7, 28
Underweight for age, children under age five	3, 7
Unemployed people	17
Unemployment rate	17
average annual	17
female as % of male	17

Indicator	Indicator tables
youth	17
youth, female as % of male	17
Unemployment, long-term	4
female	17
male	17

W

Water, improved sources	
population not using	3
population using	6, 28
Women's economic participation	
female legislators, senior officials and managers	22
female professional and technical workers	22
Women's political participation	
female legislators, senior officials and managers	22
seats in parliament held by women	22, 25
women in government at ministerial level	25
year first woman elected or appointed to parliament	25
year women received right to stand for election	25
year women received right to vote	25
